Lasting Value from Constant Change

By WILBUR E. GARRETT EDITOR

WHEN THE FIRST NATIONAL GEOGRAPHIC magazine appeared in 1888, the United States of America totaled only 38 states, Turks of the Ottoman Empire occupied the Holy Land, and Tsar Alexander III ruled Russia—though revolution was brewing. Scarcely a hundred years old, the U.S. was a serious young country convinced of its "manifest destiny." Serious men in Washington, D.C., felt the country needed a new geographic society so that "we may all know more of the world upon which we live" and founded one. Within a year they published the first issue of a magazine as their new society's principal means for the "increase and diffusion of geographic knowledge."

Now, some 7,000 magazine articles later, we bring you an index to the first century of that unending quest—a sort of field guide to a fabulous century that has packed within it a millennium's worth of social and political evolutions and revolutions and a mind-numbing cornucopia of scientific discoveries.

As a nation we've come from stampeding west and conquering the wilderness to voicing serious concern about saving what's left. As a magazine we've come from articles stressing the contributions of immigrant labor in a growing industrial complex to a 1988 report on the alarming surge of world population and overconsumption of natural resources by wealthy nations. The latter, as author Paul R. Ehrlich put it, "tends to undermine the life-support capacity of the entire planet."

This index attests that we as the Society and magazine have survived both as witnesses and players in a century that, like a runaway carousel, has seemed to move faster and faster. Yet we ride into our second century with a grip as strong as ever by heeding the editorial policies Gilbert H. Grosvenor developed and followed for more than 50 years. Late in life the "Chief" wrote about those pole stars of his career: "One principle was absolute accuracy. Others required that each article be of permanent value and avoid partisanship and controversy."

The last can no longer be avoided, nor is it always desirable or even responsible to do so. Ironically, absolute accuracy—still a goal—often makes controversy unavoidable. It is, however, possible and absolutely necessary to avoid partisanship.

As with the magazine's articles, we hope this volume itself will prove of lasting value—and not just as an index to a century of reporting. We hope that each essay, entry, page, and illustration will serve as a cue card for your memory and thereby better equip you to deal with a hard-charging future. The past is indeed prologue, but useful only if you know it.

Twice the subject of David Alan Harvey's photography, an elder from the Guatemalan highlands appears little changed in the 13 years since his 1975 appearance in a magazine article on the Maya.

Going again and again to the far corners of the world has been the essential job of NATIONAL GEOGRAPHIC writers and photographers for a century. The purpose is, of course, firsthand reporting. And sometimes after arduous journeying to such out-of-the-way places a staffer may encounter in a village a headman who exclaims, "Oh, the GEOGRAPHIC. Give my regards to Luis Marden."

DAVID ALAN HARVEY

"Let the World Hear From You"

The inventor, the architect, and the spiritual leader

By CHARLES McCARRY EDITOR-AT-LARGE

On May 8, 1902, the volcano Pelée erupted on the Caribbean island of Martinique, releasing a pall of superheated ash and steam that killed nearly every man, woman, and child in the French colonial city of St. Pierre. A convict who happened to be confined in a dungeon and two or three others survived, but at least 30,000 lives were lost.

When news of the disaster reached Washington, Gilbert Hovey Grosvenor, the youthful Managing Editor of the monthly magazine of the National Geographic Society, telegraphed the Society's President, who was vacationing in Nova Scotia, to ask if he would approve spending $1,000 to send a two-man scientific expedition to the scene of the eruption. Grosvenor received the following reply:

Go yourself to Martinique in interests of Magazine and I will pay your expenses. . . . This is the opportunity of a lifetime—seize it. Start within 24 hours and let the world hear from you as our representative. Leave Science to . . . others and give us details of living interest beautifully illustrated by photographs.

—ALEXANDER GRAHAM BELL

Bell's telegram was the first true charter of this magazine, and every Editor since Grosvenor has been guided by Bell's masterly instructions to be decisive and quick in sending people and cameras all over the world to bring back "details of living interest beautifully illustrated by photographs."

When Bell became the second President of the National Geographic Society in January 1898, it had only about a thousand members, most of them in the District of Columbia, and debts of nearly $2,000. Bell did not want the job. He was not a geographer, and he was occupied with his inventions—among innumerable other projects, he was attempting to invent the airplane through experiments with tetrahedral kites.

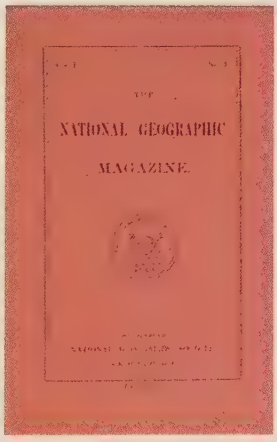
As he later wrote in his diary, he became President of the Society only "in order to save it." Family feeling was involved also: The Society's first President, who died in 1897, was Bell's father-in-law, the lawyer and entrepreneur Gardiner Greene Hubbard.

Bell saw THE NATIONAL GEOGRAPHIC MAGAZINE as the means of

Editing took no holiday for Gilbert H. Grosvenor who bent to the task under a tent at the family's Nova Scotia summer place in about 1910. Giving counsel is his inventor father-in-law, and second National Geographic Society President, Alexander Graham Bell. Leaning on his chair is son Melville (who became Editor in 1957), while daughter Gertrude sits in front.

By 1910 Grosvenor, with Bell's encouragement, had taken a magazine begun as a drab scientific journal (below) and given it a popular style, including the first printing of photographs in color.

J.A.D. McCURDY



OCTOBER 1888

This text appeared in substantially the same form as "Three Men Who Made the Magazine," *National Geographic,* September 1988.

building a great organization that would permit anyone who was interested in the world to participate, as a member of the Society, in its exploration and discovery. Hitherto the privilege of supporting the great private expeditions that fascinated the 19th-century public with reports of strange peoples, inaccessible places, and great ordeals had belonged to a few scientists and men of wealth.

But Bell understood, as Gilbert Grosvenor remarked many years later, that "the simplest man takes pride in supporting research." This idea, more than any other, has been the basis for the growth of the Society and for the popularity of its magazine.

Bell himself loved reading encyclopedias—"articles not too long, constant change in the subjects of thought, always learning something I have not known before." Though he may not have thought of his plan in exactly this way, he set out to turn the magazine into the perpetual encyclopedia that it has since become.

Other members of the Board of Managers strenuously opposed opening membership to men and women who had no qualification for it other than an intelligent interest in the world and all that was in it, but Bell prevailed.

"I can well remember . . . how the idea was laughed at that we should ever reach a membership of ten thousand," Bell said at the National Geographic banquet in 1912. "Why, it was ridiculous!"

Yet by 1912 the Society had increased its membership more than a hundredfold, to 107,000. Prudent management of the Society's funds was providing an annual surplus of $43,000 to be devoted to the promotion of geographic science.

All this, Bell said, was primarily due to one man, Gilbert Grosvenor, who in less than 13 years had transformed the NATIONAL

Guiding lights of a fledgling enterprise, Alexander Graham Bell, right, and his son-in-law, Gilbert H. Grosvenor, walk arm in arm.

On the threshold of America's entry into World War I, 150 Geographic employees follow their young Editor, his wife, Elsie, and the Society's Assistant Secretary George W. Hutchison down Pennsylvania Avenue in Washington, D.C., during the Preparedness Parade, June 14, 1916. Led by President Woodrow Wilson, some 60,000 Washingtonians turned out that day to support the war overseas. Spurred by interest in the Society's new map of Europe, membership in 1916 reached a half million.

THE BETTMANN ARCHIVE (ABOVE); GRACE ADAMS

GEOGRAPHIC into "the greatest educational journal of the world."

Grosvenor was an unlikely candidate for such striking success. When Bell hired him on April Fools' Day, 1899, he was a slender, energetic 23-year-old preparatory-school teacher who had made an outstanding academic record and been a famous tennis player at Amherst College in Massachusetts but had not a single day of experience in the magazine business.

Bell had offered the opportunity to apply for the job to Grosvenor and his identical twin brother. Edwin, the younger twin by about an hour, planned a career as a lawyer, but Bert was deeply interested in Bell's offer.

He was already in love with the Bells' comely young daughter, Elsie May, whom he had gotten to know when her parents invited the twins to visit them in Nova Scotia in the summer of 1897. It was Elsie Bell who had suggested to her father that Bert might be the promising young man he had been looking for.

DECEMBER 1905

BELL HIRED Grosvenor at $100 a month, giving him the title of Assistant Editor and the mission of breathing new life into the GEOGRAPHIC. He also offered to put up $87,000 in capital—the same amount Bell and Gardiner Greene Hubbard had lost in an unsuccessful effort to popularize another magazine, *Science,* before selling their interest for $25.

Grosvenor refused, protesting that he lacked the experience to handle such a vast sum (the equivalent of more than one million dollars in today's currency). He said that he believed that new ideas and hard work, rather than an infusion of money, were the answers to the magazine's problems.

A Native American by the name of Two Whistles, a Crow Indian, achieved a measure of immortality in a photogravure by Edward S. Curtis. Concerned that future generations would never know the richness and diversity of what he considered a "vanishing race," Curtis photographed more than 80 tribes west of the Mississippi between 1900 and 1927. The 20 volumes of photographs and text that resulted are among the most thorough documents of North American Indian life ever produced. The National Geographic, which published a collection of his photographs in July 1907, boasts a complete set of his published volumes in its rare book collection.

EDWARD S. CURTIS

The unpaid Editor was English-born John Hyde, a Department of Agriculture statistician. Grosvenor believed that Hyde and a staff of 12 associate editors, also unpaid, were producing a magazine filled with "cold geographic fact, expressed in hieroglyphic terms which the layman could not understand." In fact, Hyde's magazine contained some colorful, even controversial writing. Hyde was no fainthearted editor where photographs were concerned, either. He published in November 1896 the first photograph of a bare-breasted woman to appear in the magazine.

Despite Bell's plan to change the style of the magazine, Grosvenor had no authority to do so. Nonetheless he went at his new job with a will, nominating his father, his twin brother, and his older brother, Asa, for membership, and pestering his father, Bell, and other eminent men to nominate their friends. The annual membership fee was then two dollars (worth about $28 in today's money), and by November 1899 he had signed up 750 new members.

In his efforts to brighten the magazine's pages, Grosvenor importuned his father to approach his old friend Gen. Lew Wallace, the author of *Ben Hur,* to contribute an article.

THEN AS LATER, Bert seemed to act on the principle that any problem could be solved by a combination of hard work, frank conversation, and good connections. In January 1904 Bell cabled Bert from Gibraltar asking that he arrange a "national reception" for the remains of James Smithson, which Bell was bringing from Genoa for reburial. The 28-year-old Grosvenor asked President Theodore Roosevelt for an American warship to transport Smithson's remains from New York to Washington. Roosevelt detailed the U.S.S. *Dolphin* for this mission. Grosvenor then persuaded the War Department to provide a military escort to accompany the casket of the benefactor of the Smithsonian Institution through the streets of Washington.

Inevitably Bert Grosvenor's youthful brashness and energy brought him into conflict with the anti-Bell faction—some of whom, Bert noted, had "long white beards."

"I do not intend to get out of their way, as they plainly hint they want me to," he wrote to Bell on August 6, 1900. A week earlier he had written these words to his father: "Mr. Hyde is bent on remaining editor and knows that if I stay in, he will go out. . . . Outwardly I am very respectful and submissive, though it makes me boil."

It was a hot summer in Washington, with more than 50 days when the temperature went up to 90 degrees. Grosvenor sought relief from the heat by going out onto the fire escape of the Corcoran Building, where the Society's two-room headquarters was located, and listening to the jolly tunes of a hurdy-gurdy playing in 15th Street below. He found surcease from his battles with Hyde and the whitebeards by describing them in heartfelt letters to Elsie Bell, who was traveling in Europe with her parents.

His tales of intrigue, treachery, and insult had effect. On August 30, 1900, Grosvenor received a letter from Elsie in which she promised to marry him. "I've got her at last and she won't get away—and won't try to, either," a triumphant Bert wrote his mother.

"I doubt whether Elsie would have been as sure of her own mind," Mrs. Bell wrote to Mrs. Grosvenor, "if all her love and sympathy had not been aroused by her indignation at the attacks upon him." The turning point came when Bert was threatened with dismissal. Bell returned posthaste from Europe "to see what I can do for my boy." The Board of Managers gave Grosvenor an $800 raise and the title of Managing Editor.

The infighting that marked this situation left a lasting residue of resentment. Sixty-two years later, in an interview with Assistant Editor Allan C. Fisher, Jr., Grosvenor described his opponents as "real stinkers."

S. S. McClure, the famous editor of *McClure's Magazine,* had recommended that the NATIONAL GEOGRAPHIC change its name, move to New York, abandon the membership idea in favor of newsstand sales, and avoid all mention of the National Geographic Society on grounds that geography was an uninteresting subject. Grosvenor had opposed all these ideas.

When he and Elsie returned from their honeymoon, they learned that the Executive Committee had arranged to have the magazine printed in New York.

Grosvenor canceled the printing contract on his authority as Managing Editor without consulting anyone and brought the magazine home to Washington, where he had it printed at half the cost.

This resolute action completed the rout of the opposition. In February 1903 Grosvenor was made the Editor of the magazine and Director of the Society. At the age of 27, Bert Grosvenor was in charge of everything.

Thereafter very few people outside the family, and almost no one at the Geographic, ever called him "Bert."

Dr. Melvin M. Payne, who came to the Geographic as a secretary in 1932 and rose to be Chairman of the Board of Trustees, says that he never heard anyone but Rear Adm. Richard E. Byrd and John Oliver La Gorce, the first member of the staff hired by Grosvenor, address him by his nickname. "Oh, he was it, the boss in every respect, no questions about that," says Dr. Payne.

EVERY EDITOR who came after Grosvenor has been, as he was and believed the Editor must be, an absolute monarch whose opinions, judgment, and word are final in everything having to do with the magazine.

Although Bell retired as President in 1903, the year after Hubbard Memorial Hall was donated by the family of Gardiner Greene Hubbard as the Society's first real headquarters, his interest in the magazine did not flag. Bell frequently sent his son-in-law story ideas, as well as packages of photographs, clippings, and advice on the technique of editing. Grosvenor did not always find Bell's suggestions practical. "Mr. Bell was always anxious to be an editor," he dryly observed to Allan Fisher in 1962.

Bell kept on urging Grosvenor to travel for the magazine. "Alec won't be content until Bert goes somewhere," Mrs. Bell wrote in 1902. "[This time] it is to the wilds of Newfoundland to ascertain the truth . . . of a mysterious valley shut in among mountains with a

NATIONAL GEOGRAPHIC SOCIETY
HUBBARD MEMORIAL HALL

FEBRUARY 1910

A daring groundbreaker in its time, this picture of a Zulu man and his bride appeared in the November 1896 issue of the GEOGRAPHIC. It marked the beginning of the policy to show the peoples of the world as they are—a decision that, over the years, has sparked many a joke and cartoon. The accompanying article, "The Witwatersrand and the Revolt of the Uitlanders," was an ethnocentric description of an armed rebellion by British and other mining entrepreneurs against the Boer government during the early history of South Africa's gold industry.

still more mysterious river that disappears into the face of a perpendicular cliff 1,500 ft. high and goes—no one knows whither."

In 1907, responding to a request from Elsie Bell Grosvenor for his thoughts on the magazine, Bell wrote,"The features of most interest are the illustrations. . . . The disappointing feature of the Magazine is that there is so little in the text about the pictures. . . . It seems to me that one notable line for improvement would be either to adapt the pictures to the text *or the text to the pictures.* Why not the latter?"

In these four sentences, Bell predicted, if he did not invent, the whole future development of the GEOGRAPHIC. With his brilliant gift for perceiving the obvious, he saw that the photograph could be turned into a narrative device that was, for journalistic purposes, more dramatic, more enticing, and more interesting than words.

Grosvenor was a writer by necessity (as a young man he sold articles to other publications as a means of supplementing his earnings in addition to writing or rewriting most of the contents of the GEOGRAPHIC), and in the early years he spoke of improving the GEOGRAPHIC almost exclusively in terms of creating a more readable text. Yet he steadily guided the magazine in the direction Bell indicated. This may well have been because Grosvenor had already perceived that if he wished to make something new, he must use what was new—photography. He had published 11 pages of

photographs of Lhasa, Tibet, from the Imperial Russian Geographical Society in the January 1905 issue, an editorial decision so unprecedented—and so expensive—that he expected to be fired for it. Instead readers stopped him in the street to congratulate him.

Grosvenor had printed the Lhasa pictures primarily to fill up empty pages, but when he saw the stir they created, he repeated the experiment, running 32 consecutive pages of photographs of the Philippines in April 1905.

No editor, as he often said, had ever before printed so many pictures (138) on one subject in a single issue, and he regarded this feature as a turning point in the life of the magazine.

Membership grew in 1905 from 3,400 to more than 11,000, and increased revenues permitted the Society to relieve Bell, after nearly six years, of the necessity of paying the first $1,200 of Grosvenor's annual salary out of his own pocket.

Thereafter Grosvenor was continually on the lookout for beautiful and unusual pictures, and by 1908 more than half the magazine's pages were devoted to photographs.

From an elephant hunt in Siam to icy Glacier Bay in Alaska, writer and photographer Eliza Ruhamah Scidmore reported on Asia and the North American frontier at the turn of the century. An associate editor, she became the first woman on the Society's Board of Managers, in 1892. To meet the new rage for color images, she exquisitely hand tinted her photographs of Japanese children taken about 1910. Though this one (facing page) was not published, others from the set illustrated her article "Young Japan," in July 1914, the issue containing GEOGRAPHIC's first color-film photograph—a Lumière Autochrome of a Belgium flower show.

ELIZA R. SCIDMORE (OPPOSITE); MARTIN LUTHER KING LIBRARY

IN A LETTER FROM KYOTO, JAPAN, in 1912 Eliza R. Scidmore, an adventurous writer and photographer who may have been the first American professional geographer of her sex and was certainly the first woman to be elected to the Society's Board of Managers, gently tweaked Grosvenor's nose over his enthusiasm for photographs.

"Herewith 31 pictures of [Japanese] 'Women and Children,' mostly children, as you see," Miss Scidmore wrote. "I have had them made uniform in size and strongly colored, so that you can cover yourself all over with glory with another number in color and thereby catch a few thousand more subscribers."

This was a reference to Grosvenor's triumph in printing, in the November 1910 issue, 24 pages of hand-tinted photographs of scenes in Korea and China. These were black-and-white photographs that had been colored by a Japanese artist according to the instructions of the photographer, William W. Chapin.

The response was so overwhelming that Grosvenor inserted a color feature in every subsequent November issue of the magazine. "November," he explained, "is the big renewal number."

When true color photography was being perfected, he crowded the magazine with images captured by each new process.

Some thought that he overdid it, or did it with too little method. In Grosvenor's time modern ideas of page design had scarcely been thought about. Although GEOGRAPHIC editors provided layouts to show the printer where the words and pictures should go, photographs often appeared in the middle of articles that bore no relation to them whatever.

"It is not against color that my soul rebels. It is against the artificial massing of color, the lily-painting," wrote bluff Maynard Owen Williams later. Williams, the far-ranging Chief of the Foreign Editorial Staff who contributed 70 articles and more than 2,200 photographs to the magazine, described himself as "a rough-neck and a camera-coolie."

Grosvenor pressed on. He had, wrote Frank Luther Mott in *A History of American Magazines,* "transformed the GEOGRAPHIC into a kind of periodical never before known."

Although it was clear very early that pictures were responsible for this success, Grosvenor continued to take pride in the progress of GEOGRAPHIC writing toward his goal of realistic reportage and simple, clear exposition, and with some reason.

Joseph F. Rock, the most famous and probably the most eccentric of the free-lance explorer-photographer-writers, distilled the style that made the GEOGRAPHIC into this paragraph:

"All was quiet and hushed, as I lay on my camp cot facing the tomb of the buddha whose room I occupied. Outside, the glacier stream roared, the thunder rolled, and Dordjelutru staged an electrical display in this weird canyon. I shivered. Here, all alone, in the presence of a sacred mummy in a hoary lamasery, I listened to the tempest breaking over the icy peak of Minya Konka. . . . Had time been set back a thousand years? Did I dream, or was it all reality?"

Rock and the others traveled by steamship across the oceans and by camel, mule, and litter across the land. Threatened by Chinese bandits, Rock and his coolies escaped with his trunks of cameras and film across a river on inflated goatskins. Correspondents sometimes vanished for a year or two at a time, returning with half a dozen stories and a motion picture.

Grosvenor did not restrict subject matter. "When I hear of a story that will interest our members," he said, "I do not ask if it is about geography." The excavation and mapping of the lost Inca city, Machu Picchu, by Hiram Bingham in 1912, was essentially archaeological—so much so that Grosvenor told Bingham at first that the work might not be "sufficiently geographic" to justify a grant of money. Bingham's findings, supported in part by a $10,000 Geographic grant, produced 186 pages of photographs, text, drawings, and maps for the April 1913 issue of the magazine. The lesson was a valuable one, and after that the Society covered every sort of expedition, flight, voyage, and excavation that promised to produce new knowledge—and good copy.

Honed by two decades of seeking "the last great geographical prize," Comdr. Robert E. Peary claimed victory at the North Pole on April 6, 1909. A staunch supporter, the Geographic contributed $1,000—an early research grant—to his final expedition and upheld Peary's navigational evidence when his discovery was challenged. In 1984 the magazine asked modern Arctic explorer Wally Herbert to evaluate Peary's record. He concluded in the September centennial issue that Peary may have missed the Pole by 30 to 60 miles.

ROBERT E. PEARY COLLECTION, NGS

GROSVENOR was keenly interested in what interested people. He studied other magazines for ideas, and at National Geographic lectures, which commonly attracted 3,000 people in the afternoon and another 3,000 in the evening, he watched both screen and audience to determine which pictures the people liked the most. He found that even well-brought-up young ladies preferred the dramatic ones and were not shocked by the most explicit material.

The result was a dazzling, and sometimes dizzying, array of stories about everything from backyard insects (Grosvenor's brother-in-law, David Fairchild, built a camera 12 feet long, making novel images of grasshoppers, flies, and ants many times larger than the creatures themselves) to royal tombs in Egypt to "The Acorn, a Possibly Neglected Source of Food" to the magnificently illustrated "Fifty Common Birds of Farm and Orchard."

Grosvenor let his writers describe things as they saw them, and

they sometimes expressed opinions that would make a modern editor blanch. ("From the sounds [that blind street musicians in China] produced on their strange, discordant instruments," wrote Chapin in 1910, "we thought it would be much to their own advantage to be deaf also.")

Grosvenor tried to turn his writers into photographers, providing them with the best cameras available and all the film they needed.

Some resisted. Grosvenor explained the principle to Maynard Owen Williams: "The illustration made the National Geographic Magazine and the magazine's life depends on getting better and better pictures. The professional writer always *patronizes* the photographer. All right, let him, but pay no attention to him, but go ahead and *get pictures.*"

He continually warned Franklin L. Fisher, the conscientious Chief of the Illustrations Division, against penny-pinching. "Please note that I do not care whether he gets $50 or $100 or $200 worth more photographic material than he can use," he wrote in regard to Rock, a profligate user of film. *"The point to insure is that he get material to work on."*

As Williams told Assistant Editor Jesse R. Hildebrand, "Nothing lies as badly as a photograph that is not up-to-date."

More and more, Grosvenor came to regard text stories as an opportunity for photography. Often he would buy a manuscript, file it away, and wait for years for the photographs that might make it publishable. "There was quite a store of articles to be pulled out in case the subjects became newsworthy," recalls Frederick G. (Ted) Vosburgh, a professional journalist who in 1967 became the only word man to be appointed Editor of the magazine. "That meant you had to update an article that had been lying in the files for maybe ten years.

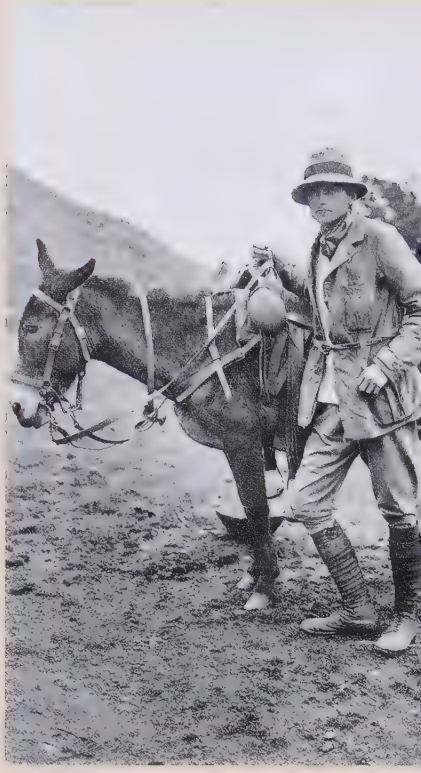
"Travel funds went mainly to the double threats, fellows like Maynard Owen Williams and that other great field man, Bob Moore, who could bring back the story in words and pictures," says Vosburgh. "Most of us had to write on our own time on subjects close to home to get stories into the magazine."

Grosvenor made himself into a first-rate photographer, and he was a student and teacher of the craft. Some of his pictures, particularly the luminously affectionate candid portraits that he made of his wife and children in the company of the Bells and other relations at their summer place at Baddeck, Nova Scotia, rank among the best ever taken by a GEOGRAPHIC photographer.

Grosvenor, the descendant of seven generations of New England gentry (the first Grosvenor to come to America was killed in 1691 by the blow of an Indian's tomahawk at Roxbury, Massachusetts), was a formal man who called his colleagues and most other people Mr. or Mrs. or Miss; the staff referred to him as "Chief."

There is a certain endearing stiffness to the many photographs of the solemn Grosvenor that were published in the magazine over the years, as if his affectionate wife had placed his aviator's cap on his head or propped him up against a redwood just before the photographer exposed the film.

Yet he was a gregarious man—he loved big ceremonial occasions



"Machu Picchu might prove to be the largest and most important ruin discovered in South America since the days of the Spanish conquest." Hiram Bingham confirmed his hunch a year after he hiked into the legendary Inca outpost in 1911. Backed in part by the Society's first archaeological research grant—$10,000—the Yale University history professor returned to the Andes leading the Peruvian expedition of 1912. Although the project was considered "archaeologic and not sufficiently geographic" at first, the results of Bingham's remarkable excavations in Peru filled the entire April 1913 issue and introduced the "lost city" to the world (following pages).

HARRY WARD FOOTE; HIRAM BINGHAM (FOLLOWING PAGES)

Among the first to make closeup photographs of wildlife in natural environments, George Shiras 3d pioneered techniques of night photography, which he shared in the GEOGRAPHIC *of July 1906. He often worked from a skiff's bow, there mounting a jacklight and two cameras of different focal lengths. Hand-holding a pan of magnesium flash powder, Shiras pursued his quarry "at a time when the hunter ordinarily is sound asleep."*

His 58-page article pleased readers but offended two Society board members who resigned, huffing that the Editor had turned "the magazine into a picture book."

GEORGE SHIRAS 3D

and was never so happy as on an outing with his wife and children—who seems to have understood the value of humor.

"Father never minded all the jokes about the GEOGRAPHIC," says his daughter Dr. Mabel Grosvenor, a pediatrician. "He said they made people sit up and think about the GEOGRAPHIC."

Grosvenor had a keen sense of public relations. Remembering a dinner that he had inveigled his second cousin, William Howard Taft, who became the 27th President and the tenth Chief Justice of the United States, into attending, he said, "Mr. Taft came, and we got a lot of publicity for the magazine we needed."

Other Presidents, including Calvin Coolidge, who had played handball with Grosvenor at Amherst, visited the Geographic, especially to award the Society's Hubbard Medal to such noted explorers as Richard E. Byrd and Charles A. Lindbergh.

OLKMAR K. WENTZEL, a member of the Foreign Editorial Staff, was reprimanded by the business office for spending $400 to buy a surplus army ambulance on assignment in India and emblazoning it with the American and Society flags and the legend *National Geographic Photo Survey of India.*

"I was so depressed I was ready to jump into the Ganges," Wentzel recalls. "However, a couple of days later I got a telegram from Dr. Grosvenor saying, 'Congratulations acquisition National Geographic Photo Survey Car.' He understood, you see."

When the *New Yorker* magazine ran a three-part profile of Grosvenor in 1943, some believed that the author, Geoffrey T. Hellman, had had a bit too much fun with the Chief's eccentricities, especially his passion for bird-watching and for inserting pictures of birds in the magazine at every opportunity. But Grosvenor liked

the portrait, admired Hellman's writing and reporting, and wrote *New Yorker* Editor Harold Ross a courtly letter of thanks for "the honor you have done me and the National Geographic Magazine."

A somewhat stunned Ross wrote back: "The National Geographic was my father's favorite magazine. . . . If he were alive, I'd show him your letter and impress him as I never was able to impress him during his lifetime."

Grosvenor's patrician manner probably encouraged the legend that the GEOGRAPHIC was a sort of gentlemen's club, but in fact Grosvenor often was one of the few certifiable gentlemen on the premises. He hired people for what he thought they could do for the magazine, not for their social or educational credentials.

Many belonged to that class of self-taught American go-getters that flourished in the 19th and early 20th centuries. Charles Martin, the inventive head of the photo lab, had been an Army enlisted man whom Dean Worcester, then a government official, had borrowed to make photographs for the article on the Philippines. Joseph Rock was the son of an Austrian manservant. John Oliver La Gorce, Grosvenor's right-hand man for half a century and the third Editor of the magazine, was a charming and gregarious person who made friends with some of the most famous people in the world, but he had only a high-school education.

Some were newspapermen or footloose youths who simply walked in off the street and captured Grosvenor's fancy. Luis Marden, a photographer, writer, and Renaissance man who discovered the wreck of the *Bounty* among many other feats and became one of the greatest stars in the history of the magazine, overheard another man on an elevator saying that the GEOGRAPHIC was looking for an unmarried man to work as a photographer. He applied for the job and, somewhat to his own surprise, got it.

The place became so militantly unpatrician, in fact, that Grosvenor felt that he must warn Franklin Fisher. "I wish you would rid yourself of your grudge against Boston Harvard men," he wrote in 1934. "Our job on the National Geographic Magazine is to get the best material, regardless of whether we like or dislike the speech or manners of the man who has it."

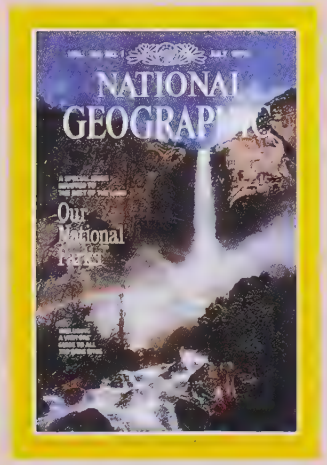
Grosvenor was proud of having been among the first employers in Washington to hire female secretaries and clerks and thought that they were far better than men at such work. His longtime Director of Personnel, Mabel Strider, is still remembered as one of the most powerful figures in the annals of the Society. It is clear from Grosvenor's correspondence with Eliza Scidmore and many others that he liked women and wrote to them in the same tone that he used to address male correspondents. In the 1930s and 1940s he urged his editors to find more female writers, noting in 1938 that many best-sellers of that year were written by women.

"I am sure there must be some hidden talent," he wrote to Hildebrand in 1949. "Men are more forward . . . perhaps that is one reason why the ladies . . . have not received as many assignments."

Yet he insisted that male and female employees eat in separate dining rooms. Exuberant Carolyn Bennett Patterson, who succeeded the crusty Mason (Monty) Sutherland to become Senior

With a lynx shot in a flash of blazing magnesium, Shiras bagged another trophy in Canada. One of his purposes in hunting by camera rather than gun was "to show that the time has come when it is not necessary to convert the wilderness into an untenanted and silent waste." In the process, he invented a whole new category of photographic record and art.

GEORGE SHIRAS 3D



A desire to preserve nature's wonders has prompted the magazine many times to report on national parks—an entire issue was devoted to the glories of and threats to the system in July 1979 (above).

When logging threatened the existence of a grove of giant sequoias in California in 1915, Editor Gilbert H. Grosvenor joined a group of eminent Americans in a visit to the site. The photograph he took of 20 men joining hands to encircle the General Sherman Tree (right) dramatized the size of the huge conifers. Later the Society and its members donated $100,000 for additions to Sequoia National Park.

A 1973 article reviewed the life of John Muir and his role in the establishment of six national parks, including Yosemite. Muir (above right, at right) visited the park with fellow naturalist John Burroughs in 1909. Yosemite's Bridalveil Fall (facing page) charmed readers in 1916.

Assistant Editor in charge of the caption writers, recalls that she was scolded by Miss Strider for "walking too fast down the hall."

The practice of printing photographs of women in what a GEOGRAPHIC caption writer described as "true native dress" may seem questionable. While it can hardly be denied that these pictures played a role in the dramatic growth of membership, Grosvenor regarded the decision to publish them as a victory over prudery.

"That sort of picture at that time was quite novel—why, people were afraid to print anything showing a woman's breasts," he told Allan Fisher. Then, breaking off to examine an illustration dating from 1910, he exclaimed, "There you see a suckling child [and its mother]. They're beautiful!"

ON THE OTHER HAND he instructed his first Director of Advertising, John Oliver La Gorce, never to accept advertisements for alcohol, tobacco, or patent medicines. Grosvenor reported in his article on Russia in 1914 that the tsar's wartime ban on vodka had proved so popular with the people that they wished their sovereign to make prohibition permanent.

Grosvenor was overjoyed in his earliest days when someone overheard two workingmen discussing the GEOGRAPHIC. Those were the readers he wanted in their millions.

"Please remember always to make your text as simple and natural as you can—so simple that a child of ten can understand it," he wrote to Williams, a former missionary who sometimes wrote like an ecstatic preacher.

Grosvenor could be brusque with a subordinate who displeased him or who strayed from the principles of accuracy, fairness, and high-quality production that he had laid down. After detecting an error in a story about Chicago, he blistered long-suffering, and in this case quite innocent, Assistant Editor William Joseph Showalter: "The cornerstone of the success of the National Geographic is fidelity to truth; once lose our reputation for accuracy, and the GEOGRAPHIC is doomed." At the bottom of this memo he scrawled, "Please do not talk to me about this matter."

Yet when Luis Marden, then a junior member of the staff, was married, Grosvenor heard about the event and sent him a two-volume bird guide and a touching note of congratulations. "Now that you are married," he wrote, "you will realize what unfortunate people bachelors are."

In 1926 Grosvenor sent this terse memorandum to Assistant Editor Ralph Graves: "Never accept anything from Magoffin. His ways are not our ways." What exactly the ways of Magoffin might have been and why they alienated Grosvenor are not recorded in the files.

Gradually the staff and Gilbert Grosvenor grew old together. Joseph Rock, the friend of the King of Muli (who dined in the same room with the gilded mummy of his royal uncle, and whose body wastes were "molded into pills, gilded, and dispensed among the peasants to prevent illness"), continued to send back his marvelous photographs and his long, convoluted manuscripts from the remotest parts of Asia. In 1948, after 29 years of service, Maynard Owen

Mobile vantage point, the vehicle of writer-photographer Volkmar Wentzel allows him a view of the crowd at the city gates of Bundi in southeastern Rajasthan. For his pictorial survey of India in the late 1940s, Wentzel outfitted a former U.S. Army ambulance bought at an Indian salvage yard after promising membership in the Society to the officer in charge. Improvisation has long marked field coverage by GEOGRAPHIC photographers and writers.

VOLKMAR WENTZEL, NGS

A legend among colleagues and readers alike during his 42 years on the staff, Luis Marden explored the remote and romantic, including the Maya city of Chichén Itzá in 1936. A pioneer underwater photographer and discoverer of the remains of **Bounty** *off Pitcairn Island in the Pacific, Marden has contributed as a free lance since retiring in 1976.*

On the plains of Gaba in southern China an expedition led by Joseph F. Rock in 1928 pauses in a valley near Lijiang in Yunnan. Outlaw escorts granted safe passage to the adventuresome journalist on this four-month journey to Gongga Shan at the request of their king, who had seen the magazine showing Rock's travels in Tibet. On rugged expeditions early explorers such as Rock produced glimpses of far-flung corners of the world rarely, if ever, seen by outsiders.

JOSEPH F. ROCK

Williams wrote to Grosvenor: "Never grieve for me if it is my good fortune to die with my boots on. That's what I most hope for."

The magazine settled into a long afternoon, repeating the successes of an earlier day, living by methods of an earlier time. After decades on the job, Grosvenor's staff knew, perhaps too well, what the Chief wanted, and they kept giving it to him.

In the late 1930s the guard began to change. Andrew H. Brown, a fluent young writer who greatly pleased Grosvenor with the popularity of his articles, was hired in 1936. After World War II Beverley Bowie, a former intelligence officer and Harvard man, introduced a note of poetry into the text before dying young of cancer in 1958. The double-threat man-and-wife team of Franc and Jean Shor invested stories with an atmosphere of breezy sophistication.

George W. Long, the only GEOGRAPHIC staffer ever to lose his life in the line of duty (his aircraft vanished over the Atlantic in 1958), and a skillful editor named Robert Conly began handling the copy of the veterans. John Scofield, a future Associate Editor, joined the staff in 1953, after his free-lance articles impressed Ted Vosburgh.

New men, such as forthright Baltimore newsman Nat Kenney, sometimes found older ones out-of-date and chafed under a system that kept editorial experimentation to a minimum.

"Nothing I can do in the name of God, grammar, or friendship will prevail upon Williams to write a simple declarative sentence," wrote Hildebrand to Grosvenor. "I am going home," Williams retorted in a countermemo. "(Declarative sentence.)"

GILBERT HOVEY GROSVENOR remained on the job for 55 years, and when he retired in 1954 at the age of 78, the Society's membership exceeded two million. He had outlived 65 of the 88 persons who had served on the board during his tenure.

In his letter of resignation as Editor, Grosvenor referred to "the presence of a strong son beside me" that he had enjoyed for 30 years, but he recommended John Oliver La Gorce as his successor.

The son, Melville Bell Grosvenor, who had been waiting quietly for his opportunity since 1924, became Associate Editor and Vice President. Melville, born in 1901, was the first of Gilbert and Elsie Grosvenor's two sons and five daughters and is remembered by nearly everyone who ever knew him for his joyful nature, his goodhearted impulsiveness, and his love of life.

"He had the enthusiasm of several 12-year-olds," recalls Melvin Payne. "I don't often use this word, but there was a certain sweetness about Melville. It was unusual in a man as big and strong as he was. But it was there."

Apparently it was there from the beginning. "You never saw such a fascinating baby," wrote Melville's Grandmother Bell in 1902. "I don't know how I live without him from day to day."

Melville and Grandfather Bell were all but inseparable. "My first conscious memory was sitting on the lap of a jolly man with a snow-white Santa Claus beard and sparkling black eyes," Melville wrote after he grew up. "[He'd say,] 'Pull my nose, Melville.' I'd reach up and tweak his nose and he'd go 'bow-wow-wow. . . .' 'Now my beard.' Then he'd bellow an awful growl."

Melville rode on the back of Bell's beautiful coach horse, Champ (and later learned to ride standing up on the back of a galloping horse of his own), did his homework in his grandfather's study while the inventor did his own work, made a toy steamboat with an egg and a candle under the old gentleman's direction, went to the movies with him—and stopped on the way home at the bakeshop at Wisconsin Avenue and P Street for apple pie. Sweets were forbidden to Bell, a diabetic, and he would warn, "Don't you say a word to your grandmother."

Grandfather and grandson spent a whole winter planning a Robinson Crusoe experiment in Nova Scotia, and when summer came, roughed it together in Bell's beached houseboat in an uninhabited cove of Bras d'Or Lake with the idea of living off berries and roots. "They lasted about a day," Dr. Mabel Grosvenor recalls.

"My brother Mel was very like my Grandfather Bell," says Dr. Mabel. "I don't know whether he inherited it or not, but he had the same enthusiasm and curiosity. They were very, very much alike. Mel was much more like Grampy than like Father."

Melville graduated from the United States Naval Academy in 1923. He resigned his commission and joined the staff of NATIONAL GEOGRAPHIC the following year, beginning a wait for leadership that, in its length and in the patience of the heir apparent, rivaled that of Queen Victoria's son, Edward VII, who was 59 when he became King of Great Britain and Ireland. Melville was almost 56 when at last he was appointed Editor and President in January 1957. He had risen through the ranks, performing nearly every job on the masthead dealing with words and pictures.

He was a fine picture editor and an excellent judge of text, even though he was a miserable speller (his father advised him to write faster and look up troublesome words in a 50-cent dictionary afterward). He was such an impatient reader that Senior Assistant Editor Bart McDowell, who ghosted many of the articles that Melville signed, once suggested that manuscripts should be lopped off at the point where the Editor stopped reading, since his attention span was perfectly calibrated to that of the average reader.

THE MAGAZINE'S distinctive first-person style has been an uncomfortable one for many writers. When Melville's son Gilbert M. Grosvenor and Allan Fisher proposed a poll of the members to see if they would accept a change, Melville told them to go ahead, but predicted that 80 percent would want GEOGRAPHIC writers to continue using "I" and "me."

"He was off by 2 percentage points," says Fisher. "Eighty-two percent of those polled favored keeping the old familiar first person." But Melville's greatest quality, by common consent, was his talent for leadership. He recognized good people when he found them, and when he found them, he hired them.

Few remember him by any but his given name, and few would differ with Senior Assistant Editor Howard E. Paine, who says, six years after his old chief's death and 21 years after his retirement as Editor, "I miss Melville every day."

Like his Grandfather Bell, Melville retained the boundless

The quintessential field man, and one of the first photojournalists, Maynard Owen Williams joined the magazine in 1919. In 1945 he awaited an audience with the King of Saudi Arabia, who had provided him with headdress and robe. But Williams reported that while trying to photograph the king:

"My head shawl got in the way of my sweaty glasses, and I tramped on the corner of my robe. My gold-wound crown slipped over my eyes at a bacchanalian angle. Even my Contax slumped forward on its tiny tripod in an unscheduled curtsy.

"Was this impromptu comedy a howling success? Far from it."

MAYNARD OWEN WILLIAMS, NGS

curiosity of boyhood well into old age. "Oh, boy, this is going to be wonderful!" he would cry, setting out for a sail on Bras d'Or Lake, waters he had navigated thousands of times before. Once under way he would be captain, guide, storyteller, and chief cook all in one, making pancakes in the shape of letters of the alphabet to match the names of any youngsters who happened to be aboard. His style as Editor was not so very different.

This miraculous capacity to be interested in everything brought him through his long apprenticeship with his spirits not only intact but also glowing in anticipation of the fun that lay before him. Although it is likely that Melville's gift for enthusiasm was a factor in the length of that apprenticeship, his father was pleased by the results his son achieved as Editor.

"Melville realizes, as I have tried to, that as the years pass, a different . . . method of expression is necessary," Gilbert Grosvenor said, five years after the changeover.

Even before he took the helm, Melville was working toward methods that would break down the orthodoxy that had settled onto the magazine as the staff grew older and more set in its ways. There had been signs of rigidity for many years. When Maynard Owen Williams tried out a Rolleiflex camera in the 1930s, he was told to "junk it" because the pictures he sent back were square, whereas only rectangular pictures, vertical or horizontal, were permitted in NATIONAL GEOGRAPHIC layouts.

Although the Rolleiflex eventually became standard equipment, a prejudice against candid cameras ran deep and lasted long. Even after the smaller cameras were adopted, they were often used to make the same static pictures produced by older cameras mounted on tripods. By the time Melville took over in 1957, of course, the magazine was half-filled with the slightly overbright, nervous hues of Kodachrome, a film that made it possible, in conjunction with new cameras and lenses, to photograph fast-moving objects in color and to make enlargements of any size that would be absolutely faithful to the colors of the tiny original.

THE FLEXIBILITY and artistic license that this new technology bestowed on photographers and picture editors opened up the possibility of a magazine as new, in its way, as the one that Melville's father had created.

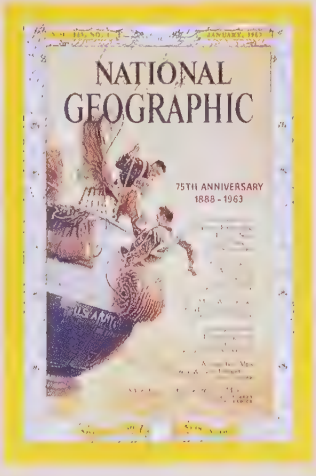
New technology made possible an expansion, both in circulation and in the horizons of coverage, that the elder Grosvenor could only dream about—although La Gorce had foreseen the need for new printing methods if the magazine was to grow. By the early 1960s Melville had, with the support of Thomas W. McKnew, Executive Vice President, moved the printing of the magazine to Chicago, where the high-speed presses of R. R. Donnelley & Sons made it possible not only to print many times the 2.3 million copies that could be produced on the old presses in Washington but also to print every illustration in color.

Melville wanted a staff that would understand this opportunity and one with the talent and daring to take advantage of it. Even before La Gorce retired, he started hiring. In this, as in everything

Bound for the stratosphere, **Explorer II** *prepares to lift off on November 11, 1935. The historic flight, sponsored by the Geographic and the U.S. Army Air Corps, reached a record altitude of 13.71 miles. On board were Capts. Orvil A. Anderson and Albert W. Stevens. A year earlier Stevens had needed assistance to escape the plummeting gondola of* **Explorer I** *(below).*

Air collected during the 1935 flight was presented for testing and chemical comparison 53 years later. Accepting (above, at center) was Joseph O. Fletcher of the National Oceanic and Atmospheric Administration. Presenting were two Chairman Emeritus of the Society, Thomas W. McKnew, left, and Melvin M. Payne. Both had actively assisted in the balloon project.

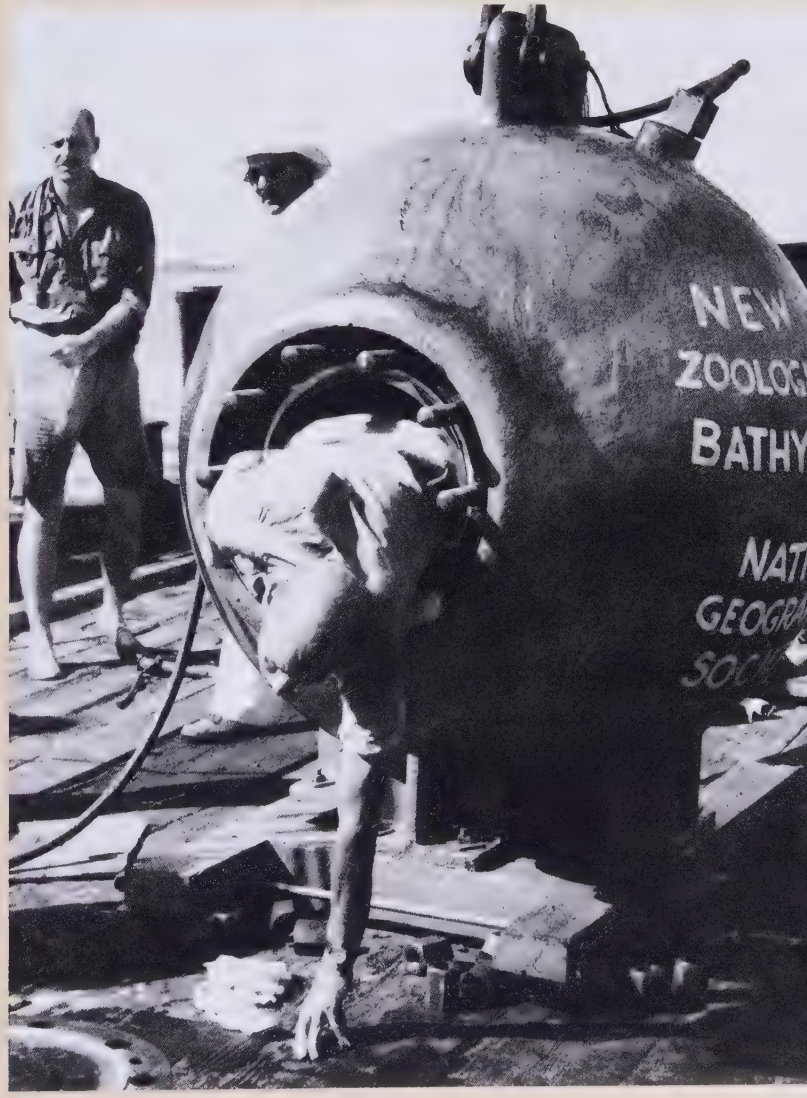
MAJ. H. LEE WELL, JR. (OPPOSITE); BILL BALLENBERG



JANUARY 1963

Probing the deep for more than five decades, Capt. Jacques-Yves Cousteau (left) has added immeasurably to man's knowledge of the oceans and life in the sea, often in partnership with the Geographic. Co-inventor of the Aqua-Lung, he also developed experimental undersea human habitats. In 1963 one such project off the coast of Sudan, dubbed Conshelf Two, included a domed "garage" (far left) to house yet another Cousteau first—the diving saucer.

Supporting ocean exploration has long been a hallmark of the Society. One particularly notable undertaking was the 1934 record-breaking 3,028-foot descent—and safe return—of the bathysphere (below) manned by William Beebe.



ROBERT B. GOODMAN (LEFT); BATES LITTLEHALES, NGS (TOP); DAVID KNUDSEN

else, he acted decisively on instinct, offering jobs to virtual strangers on the basis of brief interviews. Behind his seeming impulsiveness lay a clear purpose and a firm plan.

Senior Assistant Editor Mary Griswold Smith, one of the first new people brought aboard by Melville, was hired as a picture editor in June 1956. She was 21 years old. "I had very little education, and my only qualifications were that Melville had been introduced to my father and I was crazy about photographs," Mrs. Smith says. "Melville hired me on the spot. He said, 'I'm going to be Editor and I need young people around me.' "

Earlier he had hired an erudite young Columbia University graduate, editor, and former U.S. Army bandleader named Merle Severy, and not long afterward told him to create a new division to publish National Geographic books. Howard Paine, who had been working in an advertising agency in Springfield, Massachusetts, was employed to help Severy with layout and design.

Ted Vosburgh, Melville's Associate Editor, describes Paine as "that art director with the incredibly fertile mind who helped Melville steal the acorns."

Paine, who says that Melville put him "in charge of white space," introduced the principles, possibly even the idea, of modern design to the GEOGRAPHIC, a process that included the gradual elimination, over a period of years, of acorns and oak leaves that framed the famous yellow border of the magazine.

In the spring of 1954 Gilbert Grosvenor had visited the University of Missouri School of Journalism to accept an award for Distinguished Service in Journalism. It proved to be a fateful conjunction. There he met a talkative 24-year-old Navy veteran and Missouri senior, Wilbur E. (Bill) Garrett. He, too, was crazy about photographs and possessed stores of enthusiasm, curiosity, and impulsiveness that may have reminded Grosvenor of his own son. In a memorandum he instructed Melville to hire Garrett. When, 26 years later, Garrett became the seventh Editor of NATIONAL GEOGRAPHIC, Melville presented him with the memo.

Many guessed from the first that the hardworking, outspoken Garrett would end up in the Editor's chair. "Bill was insufferable in those days, but his talent was obvious to everyone," says Mary Smith. "We thought it was black magic." Howard Paine remembers going with Garrett to the Naval Observatory in Washington at 5 a.m. with the idea of photographing Sputnik, the Soviet satellite that was the first man-made object orbiting in space. "Sputnik went right through the bowl of the Big Dipper and Garrett went 'click' and made what may have been the first photograph of Sputnik in orbit," Paine says. "Bill always said that the secret of photography was '*f*/8 and *be* there.' But the luck that guy has!"

At about the same time La Gorce, who had also hired Melville, hired Gilbert Melville Grosvenor, just out of Yale University. He had been a premedical student with no particular thought of a career at the GEOGRAPHIC before being captivated by the camera during a vacation. Gil Grosvenor, son of Melville and grandson of the original Gilbert Grosvenor, was to rise through the masthead like his father and become Editor, President, and Board Chairman.

Elegantly attired, Editor Melville Bell Grosvenor, right, and his wife, Anne, attended the 1967 coronation of the King of Tonga with writer and photographer Luis Marden. In parkas, wet suits, or top hats and tails, GEOGRAPHIC representatives dress to fit the assignment. Grosvenor continued a tradition of widely traveled editors, at home in the field as well as behind a desk.

EDWIN STUART GROSVENOR

WITHIN TWO YEARS after taking control, Melville had hired the nucleus of the staff that would carry the magazine into the 21st century. In 1964 he moved them out of the dim and crowded precincts of the old headquarters into a light-filled modern building next door.

Foremost among the newcomers—many of whom were recommended by Garrett—was a critical mass of graduates of the University of Missouri School of Journalism, including Robert L. Breeden, now Senior Vice President in charge of Educational Services of the Society, and Associate Editor Thomas R. Smith. In 1959 Minnesotan Thomas J. Abercrombie, whose realistic photographic style marked a turning point in the way the magazine made and selected pictures, became the first of 12 GEOGRAPHIC photographers to be named Magazine Photographer of the Year. Garrett was the fourth, in 1969.

Most of the others were hired by James M. Godbold or Robert E. Gilka, who came to the magazine from midwestern newspapers in 1958. Melville made Godbold the first Director of Photography in 1959, thereby placing the work and well-being of photographers, a breed subject to uncommon stress, in the hands of a single strong executive. This was a momentous departure, and it was the key element in the creation by Godbold, and especially by Gilka, of a corps of photographers and a body of photography unique to the magazine.

Gilka, who succeeded Godbold in 1963, was on the job for 22 years, earning an unusual degree of affection and respect. His methods were much like Melville's. Says Assistant Vice President Carl M. Shrader, who served under Gilka as head of the photo lab, "Bob Gilka never told me what I could *not* do."

In writing, Melville wanted a more journalistic approach, one that would let the people in GEOGRAPHIC stories speak to members of the Society in their own voices. Precise, level-headed Ted Vosburgh acted as a moderating force in this and other enterprises. In Garrett's words, "Ted was the man who held onto the tether of Melville's magnificent airship."

One after the other, Melville hired a stable of new writers who had been seasoned by experience in the world of commercial newsgathering, including Senior Assistant Editor William Graves, a son of Ralph Graves, and several members of the staff of an expiring Washington news magazine called *Town Journal.* These included Bowie, Conly, McDowell, Edward J. Linehan (later the Articles Editor), and a raucous ex-Marine from New Jersey named Howard La Fay, who looked liked one of the Medici, talked like a taxi driver, and wrote like an angel.

In 1965 Joseph Judge, then a civil servant looking for greener pastures but who had been with *Life* magazine and a Washington television station, was asked by Allan Fisher and James Cerruti, the tough-minded editor in charge of free-lance writers, to write a small piece on Monticello to see what he could do.

The magazine bought the article and offered Judge a job. His father had been a star first baseman for the old Washington Senators. "Joe," Melville said to him, "you're going to be as good for

Clamoring to have their picture taken, children of Quemoy in 1959 swarm around Wilbur E. Garrett—photographer and illustrations editor who was named Editor of the magazine in 1980. Joining him to cover this Nationalist Chinese stronghold, shelled by mainland Communist Chinese forces in the late 1950s, was Senior Assistant Editor Franc Shor—who greeted youngsters in Chinese. During his 21 years on the staff, Shor circled the globe many times.

FRANC SHOR (ABOVE); WILBUR E. GARRETT, BOTH NGS

Turning over the helm after ten years as Editor and Society President, Melville Bell Grosvenor, second from right, consults with new Editor Frederick G. Vosburgh at a 1967 meeting in the Control Center. Associate Editor Gilbert M. Grosvenor, standing, created the center to keep track of articles from inception to publication.

The senior Grosvenor, who served the Society for 58 years, expanded grants to research and exploration, created the book divisions, inaugurated TV specials, and introduced the first all-color magazines. "Our quintessential reader. He had perfect pitch so far as what the reader wanted," an associate recalls.

JAMES L. STANFIELD, NGS

this magazine as your father was for the Senators. I used to sneak out of work to watch him play. I think my aunt 'died' ten times the year they won the pennant!"

Judge became one of the aces of the staff and, upon the premature death of Franc Shor, followed La Gorce, Vosburgh, and Scofield into the second highest post on the magazine.

"Melville transformed the Geographic from a Victorian to a 20th-century organization," says Tom Smith. Like most others of his generation who worked with Melville, Smith remembers the experience as the happiest and most fulfilling of his life. "He was like a father to us—a wonderfully unorthodox father, and that was very stimulating to young people," Smith says. "When you'd done something he liked, he'd put that big paw of a hand on your shoulder, and with a huge smile he'd let you know that he liked you and liked your work. You treasured those moments."

Assistant Editor Peter White remembers returning from Laos to find that deep changes had been made in one of his stories. He stormed into the Editor's office, so upset over the violence that had been done to his prose that he actually shouted at Melville.

"Peter, you're not well!" Melville cried in shocked tones. "You have worms. Somebody else came back from a trip and talked to me like this, and *he* had worms." After calling Garrett into the room to calm White, who by now was misty-eyed with loyal affection, Melville picked up the telephone and dialed a number. "I'm

going to send you over to my own doctor right this minute!" he said.

Severy and Paine took the dummy of a 436-page book about ships to the Editor's home on a Saturday morning, expecting to spend about an hour going over the material. "We stayed for lunch, dinner, and many mint juleps—somebody had sent Melville 23 kinds of mint," Paine recalls. "When he saw the dummy, it was 'Wow! The ship book! I've been waiting for this!' So we crawled around on the floor of Melville's study until ten that night, changing the layout around. Time flew."

Predictably, this sort of management released creativity. The whole aspect of the magazine changed; the staff felt itself involved as members of a family. It was impossible to lose interest because the head of the family insisted on living in an atmosphere of new ideas and boundless optimism.

OLD CONSTRICTIONS fell away. Gone were the acorns, the rigid rules about the size of pictures and the way in which pictures might be trimmed, cropped, and laid out on the page. Photographers, exposing thousands of frames of Kodachrome in order to capture the one instant in the life of an image that would speak directly to the reader, achieved pictures the like of which had never before been seen.

Writers roamed the world as freely as photographers in search of equally telling words. The magazine was, as it had been in Gilbert Grosvenor's heyday, wholly at ease with its times. By the time Melville Grosvenor retired as President and Editor in 1967, membership had more than doubled, to 5.6 million.

Melville Bell Grosvenor was Editor of NATIONAL GEOGRAPHIC for only ten years. In that time he built the new headquarters building in downtown Washington and an even larger building in Gaithersburg, Maryland, to house membership services, started Book Service, instituted National Geographic Television Specials, issued the first Geographic atlases and the first globes, modernized the printing of the magazine, opened a new Explorers Hall, greatly expanded the research activities of the Society, and left many other monuments to his time at the head of the Society's affairs.

In a sense, because the young people he chose and inspired more than 30 years ago are now producing the magazine he re-created, Melville is still the spiritual Editor of NATIONAL GEOGRAPHIC, just as Alexander Graham Bell remains its inventor and Gilbert Hovey Grosvenor its architect.

Their GEOGRAPHIC was born out of change, and it has continually reinvented itself in order to keep up with the changing world that is its inexhaustible subject matter. Yet at the end of its first century the magazine remains unmistakably its original self, constant to the principle of accuracy, fairness, optimism, and experimentation on which it was founded.

It is, in short, a monument to the three singular men who made it—and to their truly revolutionary idea that this journal belongs to the millions who read it, not as mere subscribers, but as members of an unending expedition to explore the earth and everything that exists upon it and beyond it.

Viewing the ruins of Angkor Wat, Melville Grosvenor keeps camera at hand in this 1959 photograph in Cambodia. He learned photography at the knee of his father, Gilbert H. Grosvenor. Following his death, the elder Grosvenor was eulogized in the October 1966 issue. Shown bird-watching (below), he spent a lifetime enthralled with every aspect of geography.

W. ROBERT MOORE, NGS

Keeping pace gracefully, Society headquarters in Washington, D.C., has grown from two-story Hubbard Hall (above, far left) to include the tiered building dedicated in 1984. Explorers Hall draws some 350,000 visitors annually to Edward Durell Stone's marble landmark, right. At groundbreaking in 1961 Melville Bell Grosvenor manned a power shovel, while then Chief Justice of the U.S. and Society trustee Earl Warren, standing, at left, consulted with the architect.

The Membership Center's tranquil setting (left) near Gaithersburg, Maryland, belies the busy pace within: Here 400 million pieces of mail are processed each year.

Taking Up the Great Global Issues

The magazine in the past two decades

By JOSEPH JUDGE SENIOR ASSOCIATE EDITOR

ARRAYED ON YOUR BOOKSHELF, our magazines seem immutable, impervious to change. The newest number takes its place smartly like a recruit joining the ranks of a renowned and ancient regiment. This is illusion; within its yellow uniform the magazine has changed continuously over the past two decades. From 1970 changes were worked on it by the very act of reporting on a world that was passing through profound social, economic, and political disturbances. Those were the years of Vietnam, of oil price hikes, of terrorism; of acid rain, Chernobyl, and population explosion; of brushfire wars, starvation in the Sahel, and AIDS; and of the continuing collapse of order in what had been the old colonial world.

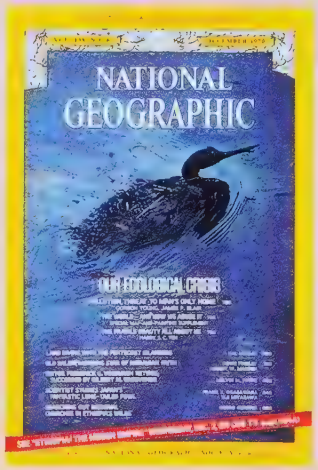
It was an era of a global economy turned upside down, of power risen from the dust and ashes of Japan and Germany. People in developed nations were asking if the price of progress must be fouled water, impure air, and poisoned land—while those in the poor nations were asking for the chance to have such problems.

Had the GEOGRAPHIC been guided in that turbulent period by the same codes of journalism that had prevailed in earlier years, it would simply have become irrelevant. But under Editors Gilbert M. Grosvenor and Wilbur E. Garrett the magazine took up, in its own distinctive way, the great global issues. It met the tests of relevance, and it flourished.

In many ways the last magazine to appear under Frederick G. (Ted) Vosburgh, a landmark number dealing with the threat of world pollution, was also the first for Gil Grosvenor, since it epitomized one of the enduring interests of his editorship. Gil and the editorial staff who had assembled that issue under Ted helped to set precedents that would mark the next decade as one in which the realities of the world were looked at straight on.

Those realities were marked by the United States' embittered departure from Vietnam and the continuing agony in Asia. They included a seemingly endless Cold War playing out its hot conflicts in Africa and Afghanistan, and a Central America festering from old inequalities of wealth and power. We could not pretend that such a world did not exist, nor could we go at it in the same old way. No longer could the man or woman from the GEOGRAPHIC arrive with 18 Halliburton cases and be greeted more as a celebrity than as a journalist. It was to be the era of the anonymous suitcase, the duffel bag, and the low profile.

Environmental degradation, stewardship of natural resources, the dilemmas of the oil economy and nuclear energy—facing hard issues became a hallmark of the editorship of Gilbert M. Grosvenor, announced in the December 1970 GEOGRAPHIC. After a decade Grosvenor succeeded Robert E. Doyle as President of the Society.



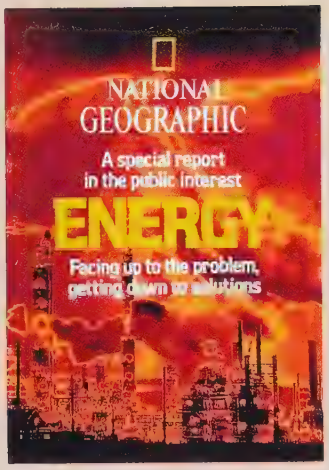
Wilbur E. Garrett was named Editor, a Geographic veteran with firsthand knowledge of the world's hot spots as symbolized by his 1973 photograph of Hmong women in Laos. For years Hmong fought in the war in Southeast Asia for the U.S. Later many emigrated to the United States; others got no farther than a refugee camp.

A constant evolution keeping pace with a constantly changing world has been the story of two decades under two Editors.

WILBUR E. GARRETT, NGS

One of the traditions of the magazine had been a straightforward approach to geographic places. We had often covered cities, states, and countries—*Here's Belgium!*—on the basis of internal inventory rather than on any notion of contemporary interest. To break from that pattern, Gil made new use of an old instrument, a planning council of senior editors; they began to select places for coverage that had a direct bearing on world events or peoples' lives.

ASH MARKS ON THE SOULS of staff writers from this period depict the trend: La Fay in Uganda, Syria, Leningrad; Ellis in Bangladesh, Cairo, Istanbul, Japan; Jordan in Sri Lanka, Somalia, Turkey; White in South Korea, Poland, Tanzania, Calcutta, Quebec. Jim Cerruti, a gruff but brilliant editor, set about bringing talented free-lance writers to the magazine—names like John McPhee, Charles McCarry, Douglas Chadwick, Peter Benchley, Tom Wolfe, Robert Laxalt, Paul Theroux, François Leydet, and Griffin Smith.



Triggered by revolution in Iran, a gasoline shortage in 1979 spurred the magazine to take a hard look at our nation's spendthrift ways with nonrenewable energy resources. The result was a special 13th issue, published in February 1981. The social and environmental costs of industrialization are now common themes as the Society promotes geographic knowledge in an increasingly interdependent world.

Essential to the GEOGRAPHIC's enduring popularity was the universally admired quality of its photography. Yet it too was undergoing a metamorphosis. Under the direction of Robert Gilka, the young photographic staff brought back images that went to the heart of the new realism typifying the magazine's direction. Jim Stanfield, Jim Blair, Bruce Dale, Gordon Gahan, Dave Harvey, Emory Kristof, Win Parks, Steve Raymer, Jodi Cobb, and others. They and outstanding free-lancers such as David Doubilet, Cary Wolinsky, Jonathan Blair, Bill Allard, Steve McCurry, Sam Abell, Jim Brandenburg were able not only to produce the traditional coverage of people and places but also to do so in sudden and illuminating moments that could make you catch your breath and seemed to look into the heart of things. Coverage was becoming reportage.

The test of reportage was Content with a capital C—that combination of lucid text, distinctive cartography, informative and elegant art, and brilliant photography splendidly printed; each facet complementing and supplementing the others. In a world given to special pleading and contentious haggling, the whole was verified—double- and triple-checked by a research staff second to none.

This was the new GEOGRAPHIC. Not only the moment recorded by the daily press but also the other moments, ones that mattered—thousands of wistful, sad, angry, anxious, hopeful, triumphant moments in human lives that unfolded and gave readers in millions of homes around the world insight into their times and far places.

The deployment of such gifted photographic and writing talent was not haphazard. For instance, the magazine examined American public policy in regard to its natural resources in a series that covered the wilderness system (1974), wild and scenic rivers (1977), national wildlife refuges (1979), national parks (1979)—a series completed in 1982 with the national forests. We had not forgotten the beauty and soul-renewing powers of our natural heritage, forever relevant but not forever unless we looked to its preservation.

This was the age of the supertanker superspill and other environmental crises. The oil embargo had pushed Americans to some hard choices. On the North Slope of Alaska, for example, the

Glowing streams of molten waste spill from train-borne ladles onto a slag heap, the dumping ground for a smelter at the Canadian mining town of Copper Cliff, near Sudbury. This area of Ontario supplies much of the free world's nickel and is an important source of copper.

Mankind the producer is also mankind the disposer, a theme addressed in articles covering such topics as radioactive and other hazardous wastes, acid rain, trash, pesticides, oil spills, and air and water pollution.

WINFIELD PARKS, NGS

bottom line seemed to be oil now, tundra later. But the range of our concern was wide—from the Everglades and the Serengeti, to Yellowstone and our salt marshes, from the Great Lakes and the Cooper's hawk, to Big Cypress and the world's whales, from the wolf and the Grand Canyon to the last of the tallgrass prairie. It seemed we led articles on such subjects with a question—can we save it?

THE CONSERVATION MOVEMENT was coming to maturity with the consent of the American people, and legislation was moving forward to protect our air and water and to better manage the parks and forests and wilderness areas. Inevitably a few articles stand out from an effort like this and speak for all others. I think of Tom Canby's and Steve Raymer's "Can the World Feed Its People?" and Allen Boraiko's and Fred Ward's "The Pesticide Dilemma." The magazine was confronting issues crucial to society's progress in a world of growing want, land abuse, and poisoning of the earth in the name of abundance. This brought us to confrontation with powerful lobbies that pleaded expediency on the environment in the name of employment and profit.

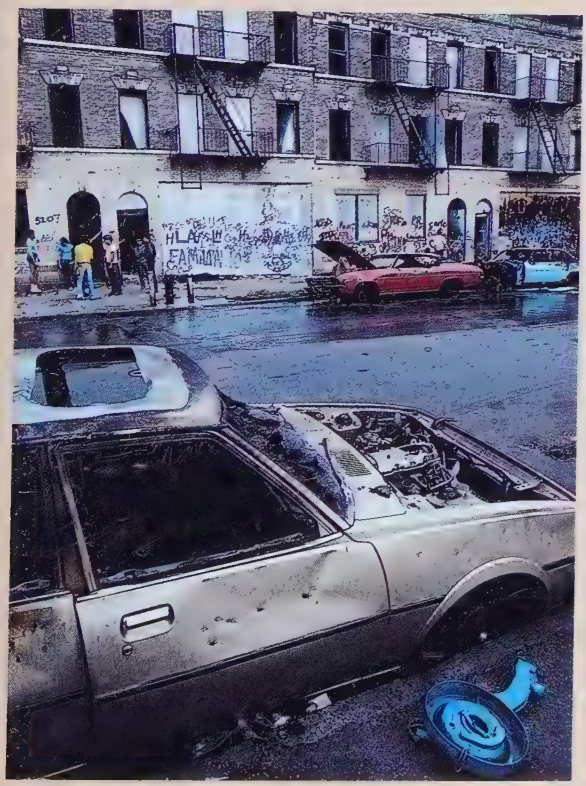
The path to confrontation was also being laid by articles on Cuba, a divided Canada, Harlem, the Philippines under Marcos, and South Africa—all "bad news" stories for those Board members who remembered the world in palmier days and thought that perhaps our reporting on those troubled places helped make the trouble. A long-standing part of the magazine's tradition had always been its avoidance of controversy, but here we were awash in it.

Masked volunteer undergoing a test of smog's eye-irritating effects illustrated the bellwether December 1970 issue, which featured a major article and a supplement map on how humankind pollutes the environment.

In that article the Cuyahoga River in the Cleveland factory district (upper right) seemed a modern-day Styx, so polluted with oil and debris that it had caught fire the year before. Raw petroleum gushed from a drilling platform off Louisiana (right) after a fire that burned out of control for a month in 1970.

Visual pollution assaults our eyes and sensibilities. Cars stripped by vandals added to the seediness of the Sunset Park area of Brooklyn, a neighborhood since renovated through a joint initiative of business and government. Near the foot of the Great Pyramid of Khufu, pieces of litter sit as rude testimony to thoughtlessness.

ROBERT W. MADDEN, NGS (RIGHT CENTER); LOUIE PSIHOYOS (FAR RIGHT); JAMES P. BLAIR, NGS



In the Italian industrial city of Milan, a centuries-old Madonna (above) is obliterated by acid formed from rainwater and sulfur deposits left by air pollution. As the environment emerged as a major theme of the GEOGRAPHIC, its spotlight turned to examples of man's carelessness and destructiveness, such as tree-killing emissions from smokestacks and automobiles, pesticides harmful to wildlife, and radiation released from Chernobyl.

Overgrazing by flocks of goats was blamed in part for expanding the wasteland of the African Sahel, where nomads were compelled to settle in shantytowns (facing page) like this one on the edge of Nouakchott, Mauritania.

JAMES P. BLAIR, NGS (ABOVE); GEORG GERSTER

Our first brush with it came when the American Jewish community reacted sharply to our description of conditions for Jews in the Syrian capital of Damascus. The need to explain our position led to the first Editor's column, which has become a standard feature.

In the mid-1970s certain distressed Board members proposed an editorial oversight committee. It never materialized; no journal can survive with a committee watching over the shoulder of an editor. In its stead, a "Reaffirmation of Editorial Policy" was agreed upon, stressing the slow evolution of change. It was printed on the January 1978 contents page, and we went on with our work.

Actually, the magazine was doing nothing that it had not always done—first-person narrative reporting. The facts stood by themselves beyond our power to affect. The French Canadians were talking of separation from Canada. South Africa, alone among nations, was enforcing racially-based apartheid as a matter of national policy. The family and friends of Marcos were running a nation like a personal corporation. In Cuba Fidel Castro had made dramatic strides in literacy and medical care. We could say no different.

NEW EXUBERANCE came to the magazine through William Graves's "Expeditions" department. A sign in his office proclaims that "Adventure is a sign of incompetence," and during the past few years a number of unforgettable "incompetents" have trekked through our pages—Tim Severin crossing the Atlantic in a skin boat in the wake of the Irish abbot St. Brendan; Robyn Davidson crossing the Australian outback on a camel; Naomi Uemura making it solo to the North Pole; Ed Yost just failing, then Ben Abruzzo, Maxie Anderson, and Larry Newman succeeding in making the first transatlantic balloon flight. And two figures with that special kind of GEOGRAPHIC magic—Peter and Barbara Jenkins, walking across America and into fame by participating in the life of the unreported people of the back roads.

It was just such people who found themselves in predawn lines for gasoline when the oil embargo and skyrocketing oil prices hit the world and the United States and Western Europe and Japan suddenly realized their vulnerability in providing for their own energy futures. It was a subject in which Gil and his staff had been interested from the beginning. Ken Weaver's "Search for Tomorrow's Power" in 1972 had opened a continuing series of articles on oil resources, coal, wind power, geothermal and solar energy, natural gas. We visited "The Arab World, Inc." and rode the supertankers across the world's oceans. We went where the energy play was—Alaska's North Slope, Canada's tar sands, Oman, Saudi Arabia, Kuwait, the North Sea, and the Atlantic continental shelf.

Then, in 1979, came a decisive moment. In April, within days of publication of our article on "The Promise and Peril of Nuclear Energy," a reactor at Three Mile Island melted down. What the magazine had called "the friendly atom" in 1954 and "the obedient atom" in 1958 suddenly proved to be neither. The extent of the difficulties and dangers in using nuclear fuel as a commercial power source was revealed; the agencies and corporations involved in that development had told less than the whole truth about the depths

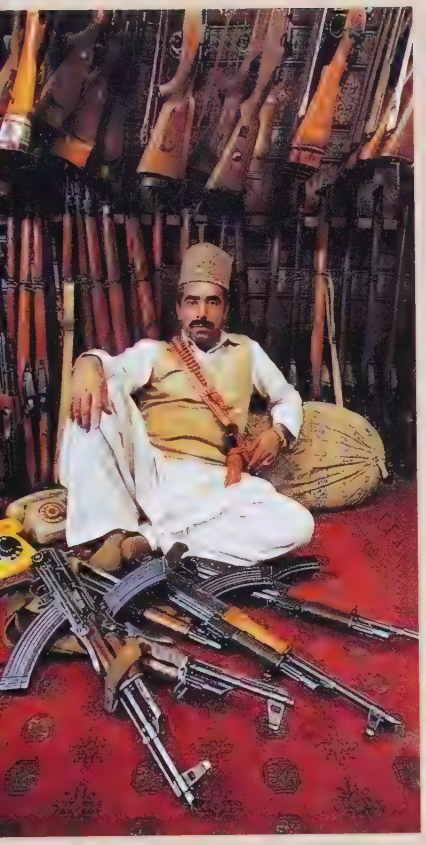
R 67215

Fear and the future's uncertainty haunt the face of an Afghan girl (right), eloquently photographed by Steve McCurry in a refugee camp in Pakistan. On the cover of a 1985 GEOGRAPHIC, *she brought home the terror of war in a realm where poorly armed freedom fighters faced more than 100,000 Soviet troops. To chronicle global violence and repression, and dispassionately explain its roots, magazine writers and photographers went—often at great risk—to places making newspaper headlines.*

At the funeral of compatriots killed during a foray into Lebanon, Israeli soldiers (above) mourn atop the grave of an earlier battle's casualty. South Africa's unyielding policy of apartheid is epitomized in the black township of Soweto as a mother and children stroll toward an armored vehicle (left).

Robert Caputo's poignant April 1988 article on Uganda reported on the vicious tribal wars that slaughtered perhaps 800,000—including the wife of this Baganda farmer—and the virulent AIDS epidemic. His report drew kudos from World Health Organization officials attempting to stem the disease.

DAVID TURNLEY, DETROIT *FREE PRESS* (LEFT); JODI COBB, NGS (ABOVE); STEVE McCURRY (TOP RIGHT); ROBERT CAPUTO



Armed conflicts change borders, governments, and societies—and the NATIONAL GEOGRAPHIC has reported on them since 1900 and the Boxer Rebellion. Both World Wars, Korea, and Vietnam were covered by the magazine.

We sent a team to Pakistan's border with Afghanistan in 1985, seven years into the Soviet Union's ten-year effort to control that country and the **mujahidin**—*freedom fighters. Photographer Steve McCurry found that the business of war kept Afghan refugee arms merchant Haji Baz Gul close to his two telephones and his assorted deadly weapons in Darra, Pakistan. Before him lay coveted AK-47 Kalashnikov assault rifles, priced at $1,200 each.*

STEVE McCURRY

of the problems. Where to turn for energy? Some of the best oil resources were controlled by nations of uncertain stability and vulnerability. Burning coal seemed a dirty alternative. Synthetic fuels had promise but were a long way from commercial viability.

Gil decided on a major departure and directed publication of a 13th issue of the magazine in 1981, a special report devoted to a single topic—energy. It appeared in February and was one of the pinnacles of his career as Editor, even though he had become President of the Society by the time it was published. Another was the opening of long-closed doors: In 1971 the magazine published an exclusive report by Audrey Topping, one of the first Western journalists to travel widely in China after the Cultural Revolution. In 1973 Ed Kim squeezed his way into North Korea via Moscow, the first Western photojournalist to visit the country in 30 years. Three years later Fred Ward was able to travel freely inside Cuba, and in 1980 we unlocked the last closed door when Mehmet Biber managed to get into hermetic Albania—altogether a good bag of firsts for any decade of reporting. An ironic footnote is that as of 1988 among the few nations in which we had no members were North Korea and Albania.

Not that in those days we had many in Syria or Egypt, countries we reported on when the Soviet presence was paramount and few American reporters were allowed on the premises. We wanted those stories because Gil stressed the need for balance, for a diverse mix, in every issue. One of his guiding principles was that every member had to find at least one article in every issue that he or she found of interest. Those interested in the dramatic turns of the Middle Eastern world during the 1970s would find them, generally in an issue that featured horses of entirely different colors.

In 1972 Tom Abercrombie's "The Sword and the Sermon" had expounded, for the first time in a major American magazine, the history of Islam and divisions between Shiite and Sunni Muslims, terms the American people would come to know during the Iranian hostage crisis eight years later. Much in history helped to explain the present. Loren McIntyre's piece on the Inca; Howard La Fay's and David Alan Harvey's article on the Maya; Merle Severy's and James Blair's still definitive work on the Celts; and the story I did with Gordon Gahan on the Minoans and Mycenaeans illuminated entire historical epochs and cultures whose tendrils reach into the present. They established a genre that only the GEOGRAPHIC is equipped to do so well.

DRIVEN BY THE SOCIAL CONCERNS of the 1960s and '70s, people turned to the past with relief. But they were also fascinated by glimpses of a future being born out of basic and applied science. The magazine made a permanent record of America's reach into space, documenting Mercury, Gemini, and Apollo flights, culminating in the first and subsequent lunar landings. In 1976 Viking got to Mars and gave us unforgettable images from the red planet. That same year we published "The New Biology," our voyage into the human cell. Samuel Matthews reported on plate tectonics and the new geology and also global

climate change. We also went with young scientists like Robert Ballard down to the Galápagos Rift and found there new life forms in the cold abyss of the deep sea. We were a mirror of whatever time we were in. We changed, we reflected, we held up the light, and I cannot but think that people who read the magazine in this turbulent period had a better grip on reality as a result.

AS THE EDITOR'S BATON WAS PASSED to Wilbur E. Garrett in August 1980, a great story bridged past and future. Rowe Findley's masterly account of the cataclysm at Mount St. Helens became at once, and has since remained, the single most memorable article in the magazine's century of publication. The article presaged many things about the Bill Garrett editorship—chief among them the instinct for the big story. We had a peerless first-person account; what we needed were photographs of the colossal event. Under the direction of Tom Smith, chief of illustrations, Bruce McElfresh left no stone unturned in the search. The cover photograph was taken by an amateur, as were many inside pictures. The entire effort was a triumph of collection and editing.

The most recent years of the magazine's history will need a chronicler from the future, for we are still in medias res. But this much can be said without fear of retrospective change—no years have been more creative or innovative. Big and important and different stories became the rule rather than the exception, and the

"Help my baby—please!" For a Vietnamese mother, the desperation of war became almost unbearable when she could find no doctor for her sick infant. When a U.S. Navy patrol boat stopped her vessel for inspection, she thrust her child toward an interpreter with the urgent plea. The sailors gave her all the medical aid they could before moving on. That was in 1968, and it would be 1973 before a truce ended the United States' 12-year combat involvement. The GEOGRAPHIC published a dozen articles on the Southeast Asia conflict that took more than a million lives, including armed forces of both sides but mostly civilians—many of them children.

WILBUR E. GARRETT, NGS

Cataclysm and catastrophe not only alter the shape of the planet but also take a continuing toll on humanity. Behind the headlines of disasters the GEOGRAPHIC has always tried to provide both human and scientific insights. In 1986 a lake in Cameroon suddenly expelled a mammoth hiccup of deadly carbon dioxide that suffocated 1,700 villagers (below). A mother in Bangladesh mourned her dead baby in 1975 (right), victim of famine that recurs in that overpopulated land. In India's Rajasthan women were driven to the scant shelter of a tree by gritty winds (top center), ominous prelude to the seasonal monsoon,

whose welcome rain sometimes means deluge and death.

In 1980 a National Guard helicopter crew found a truck holding two of the 61 people killed in the volcanic explosion of Mount St. Helens (right). For Assistant Editor Rowe Findley, who witnessed the aftermath of the violent eruption and reported on it in the January 1981 GEOGRAPHIC, it demonstrated the peril "for all of us living on a planetary crust so fragilely afloat atop such terrible heats and pressures. Never again . . . would I regain my complacency about this world we live on."

HELIMISSION (ABOVE); STEVE RAYMER, NGS (TOP LEFT); RALPH PERRY, BLACK STAR (RIGHT); STEVE McCURRY

JANUARY 1981

GEOGRAPHIC emerged as a voice of importance and consequence.

Staff writers and photographers felt that Bill Garrett's style was akin to Melville Grosvenor's instinctive journalism: *There's the story, right there; let's go get it!* Often Bill went and got it himself. The old field maxim—you don't know if you don't go—became an operating imperative in the Editor's office. He, for instance, wrangled permission to go to Angkor Wat, closed to the outside world since 1975 when Pol Pot took over Cambodia, now called Kampuchea. He took Peter White and Dave Harvey with him, and they brought out a second story, the living nightmare of Kampuchea, where Pol Pot's revolution had resulted in the death of more than a million of his own people.

With the increase in terrorism and political exploitation of human tragedy in places like Ethiopia, the Sahel, Haiti, and Nicaragua, the stress points seemed to run deeper, and the writing and photography from those places were graver than any we had published. We looked into Khomeini's Iran, and, more hopefully, into a quickly changing China.

We looked as well into the abyss. With "The Poppy," Peter White's and Steve Raymer's brilliant reportage began with a flower. From its seed capsule comes opium, which can be refined into morphine to block severe pain, and heroin, a drug so abused that it affects every aspect of world culture, economy, and politics.

Again, the magazine was changing yet staying the same. New features like Members Forum, On Assignment, and Geographica were added. The most striking innovation, however, was the use of holograms on the cover—the first three ever attempted by a large-circulation magazine. These publishing firsts attracted a lot of public attention, as did Bob Ballard's discovery of *Titanic* and my own article on the landfall of Columbus at Samana Cay in the Bahamas.

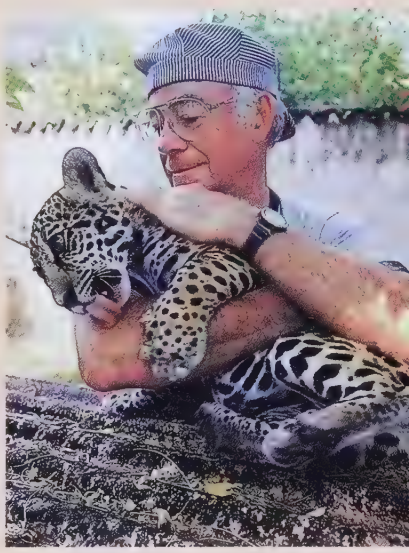
AS THE CENTENNIAL of the Society drew near, Bill Garrett was once again thinking big—not one centennial issue but four to close the year. Those issues were monuments, containing 130 extra pages and examining Society history and the overriding questions of humanity's past on earth, achievements in exploration, and the future of the planet under the stress of human population and development—great themes played out on a large scale in articles of enduring interest and importance. Two map supplements—a world map using a more realistic projection and an extraordinary view of the Himalaya—were published.

Always the wheel of time and change is turning in human affairs, presenting to the magazine the possibility of new discovery, new exploration, and the unexpected big story that makes the presses rattle. Some who served on the final years of this hundred-year voyage are gone, and this index is their epitaph: Shor, Conly, MacLeish, La Fay, Gahan, Parks, Aikman—staff writers, photographers, and editors who lived interesting lives and brought to you interesting stories from far places.

They were among that particular and peculiar legion of talented journalists upon whose days and nights in the field this particular and peculiar edifice always has and always will rest.

Mountain music springs from the fiddle of Carolyn Tolley (facing page), who plays for a young listener at a festival near Pipestem, West Virginia. Searching for the essence of a place, GEOGRAPHIC stories on states, cities, and nations strive to convey the texture of everyday life.

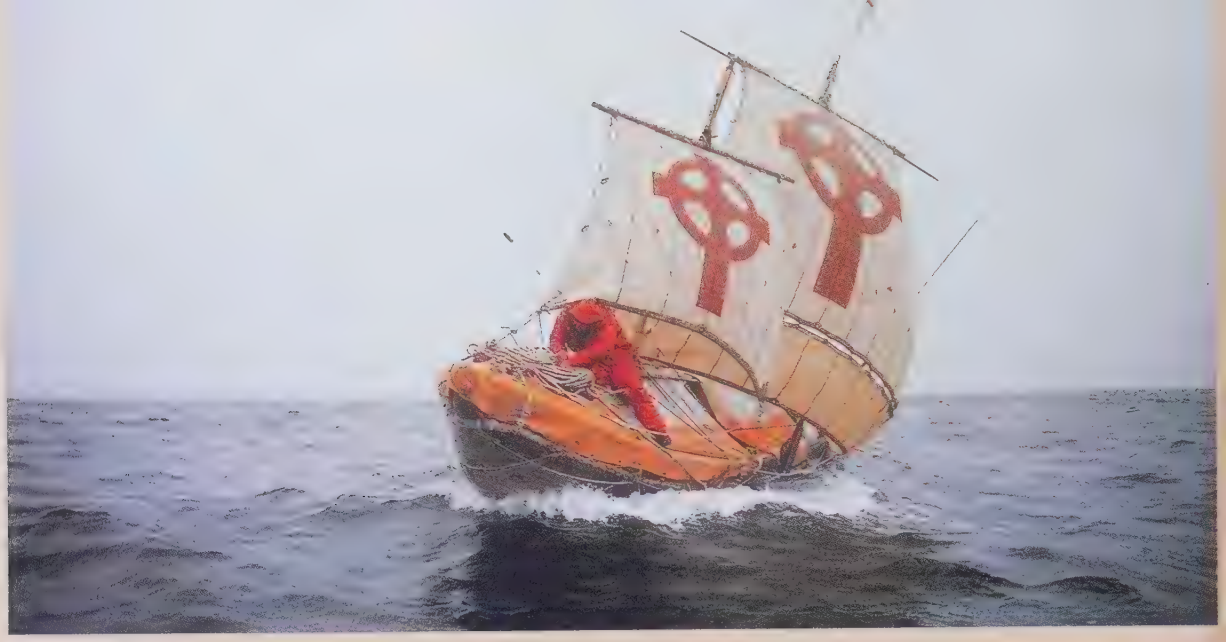
JODI COBB, NGS



Threatened native: A young jaguar gets a pat from Editor Wilbur E. Garrett in Guatemala. A hotel manager adopted the orphaned cat; its parents probably were killed for their skins, the sale of which is illegal. The owner hopes to breed the cat and free the cubs in the wild.

Long a student of both wildlife and Mesoamerica, Garrett has promoted creation of Central American wildlife sanctuaries. GEOGRAPHIC articles trace the worsening problem of endangered species in the face of shrinking habitats and the illegal international wildlife market.

DAVID ALAN HARVEY



Adventures in search of history and geography have long intrigued GEOGRAPHIC *readers. Using medieval documents, modern-day explorer-historian Tim Severin built a replica of a leather boat (far left) that, legend says, the sixth-century* A.D. *Irish monk and explorer St. Brendan may have sailed to the New World. Severin successfully sailed the wood-and-oxhide vessel from Ireland to Newfoundland in 1976.*

Alone in the outback (left) Australian Robyn Davidson, her four camels, and dog, Diggity, endure a drenching rain on a 1,700-mile trek across Australia's forbidding western desert.

Triumphant hug (below) unites climbers Annie Whitehouse and Christy Tews after their all-woman team reached the Himalayan summit of 26,504-foot Annapurna I.

Afloat on Arctic ice (left), dogs and crew of the Steger International Polar Expedition struggle on their thousand-mile trip from Canada's Ellesmere Island to the North Pole. They were the first to cover the distance by dogsled without resupply since Robert E. Peary attempted the journey in 1909.

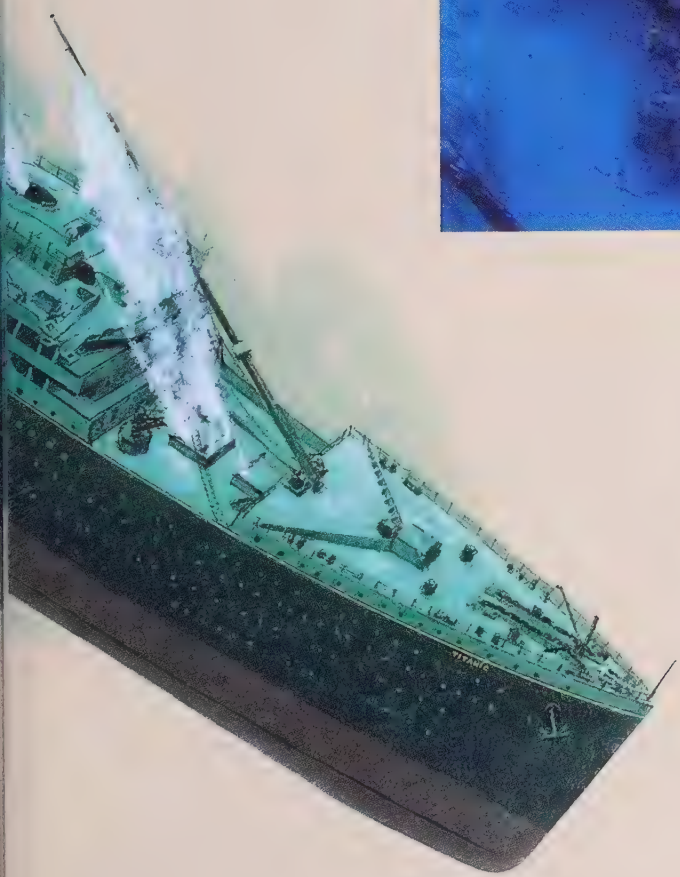
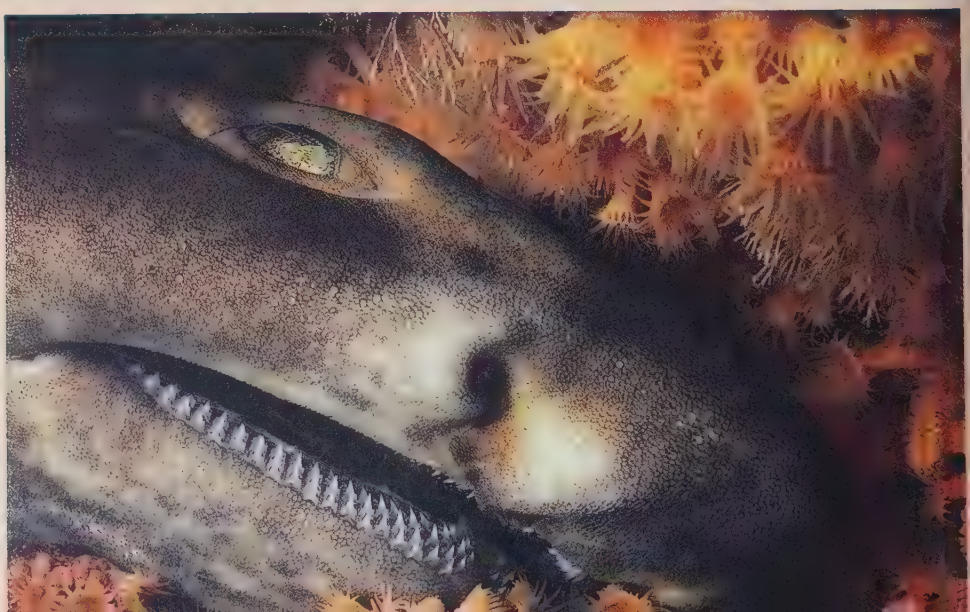
WOODS HOLE OCEANOGRAPHIC INSTITUTION

Thousands of priceless artifacts from the Late Bronze Age were recovered from a 3,400-year-old wreck off the Turkish coast. When divers (right) tried to lift a clay storage jar, Cypriot pottery packed inside tumbled out. A pile of huge four-handled copper ingots litters the seafloor. George F. Bass, with National Geographic Society support, led the excavation of the wreck, which also yielded weapons, exotic woods, and aromatic resins, as well as terra-cotta jugs, a cup, and bowl, all of Mycenaean workmanship (below right).

BILL CURTSINGER





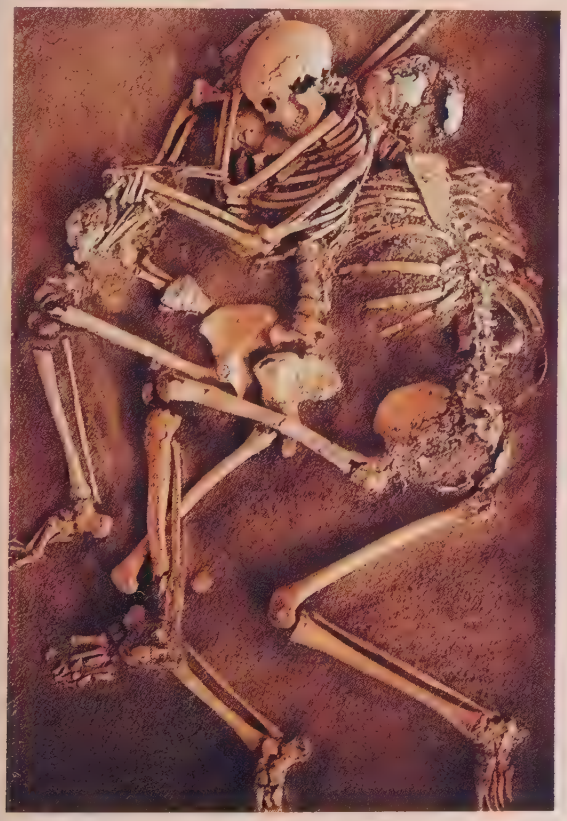
The sea is a wondrous place that mankind has yet to completely explore. And we continue to find powerful statements in the oceans and their myriad inhabitants. A gentle leviathan (left) cruises the waters off Península Valdés on Argentina's Patagonian coast. This southern right whale, returning to its breeding grounds, senses no danger from a diver.

A southern elephant seal pokes its head through a kelp bed to growl at an intruder (above) in the Kerguélen Islands, part of the French Southern and Antarctic Territories in the Indian Ocean.

Anemone-like zoanthids cushion a dozing California swell shark (bottom, far left), which can inflate itself by gulping water or air.

Off southern Australia a leafy sea dragon sports a beautiful but tough exoskeleton (left).

MITSUAKI IWAGO (ABOVE); DAVID DOUBILET (LEFT); FLIP NICKLIN



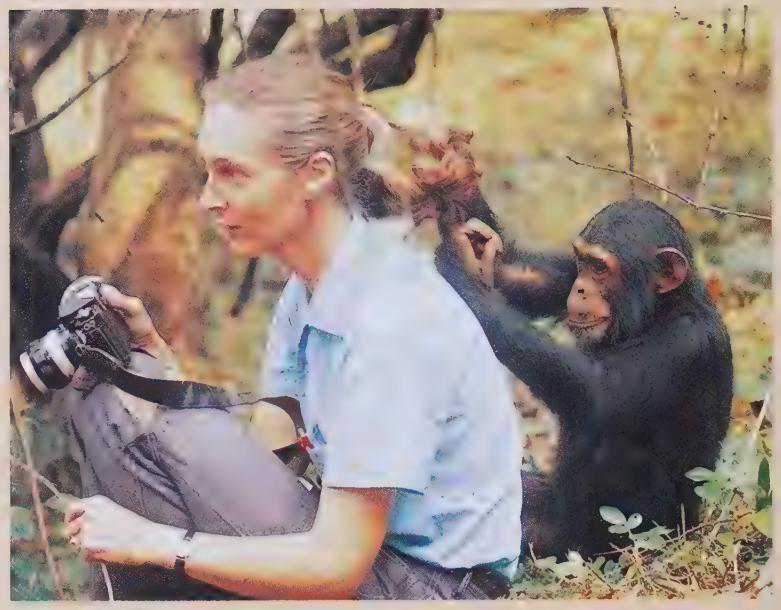
Ancient civilizations tell their tales as archaeologists report on the findings of Society-sponsored expeditions. One of the most spectacular sites, the 1,500-year-old tomb of a warrior-priest (facing page) who ruled the Moche people of Peru's north coast, is watched over by silhouetted guards alert for looters. The grave yielded fabulous gold artifacts. Recitals once echoed through a small marble concert hall called an odeum at Aphrodisias, an ancient Greco-Roman city excavated in Turkey (top). Poignant testimony to disaster, a man, young woman, and small child were crushed during an earthquake in the city of Kourion on Cyprus (left). In Mexico, nine-foot-tall Maya figures stand in the late seventh-century A.D. Palace of Palenque.

BILL BALLENBERG (FACING PAGE); DAVID L. BRILL (TOP); MARTHA COOPER (LEFT); DAVID ALAN HARVEY

Creatures great and small, fascinating and often imperiled, challenge our stewardship of the planet: from bluebirds to blue whales, marauder ants to muskoxen. In Tanzania's Ngorongoro Crater and nearby Serengeti National Park, black rhinoceroses (right) that numbered in the hundreds in the 1970s have plummeted to only about 20 today due to poaching. Ngorongoro's lions have fared better. Youngsters lounge on a parched lake bed during the dry season (below). In Island Park, Idaho, a great gray owl shelters her owlets after a night's rain (left). Embodying all the raw power of the wild, a brown bear tears into a sockeye salmon in Alaska's Katmai National Park.

MICHAEL S. QUINTON (TOP LEFT); EMORY KRISTOF, NGS (TOP RIGHT); MITSUAKI IWAGO (LEFT); JOHNNY JOHNSON

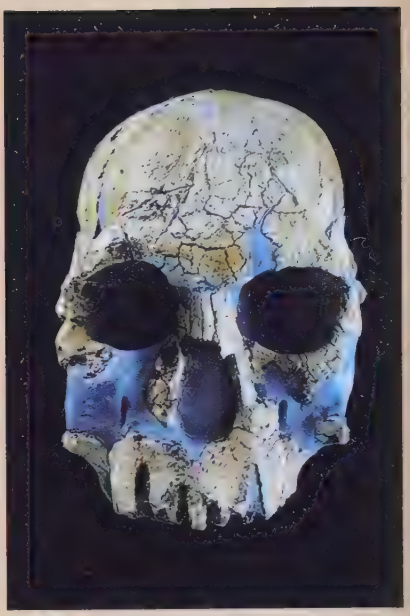
Observing the great apes up close—something many scientists once believed was impossible—has yielded a wealth of data about humankind's closest relatives. Supported in part by Society research grants, three scientists have achieved unprecedented field studies of primates. The first, Jane Goodall (right) began in 1960 at remote Gombe National Park in present-day Tanzania, making the chimpanzees' home her home. After earning the trust of the wary animals, she studied their hunting behavior and discovered their tool-making capabilities. Evolutionary biologist Stephen Jay Gould calls her work "one of the Western world's great scientific achievements."



Likewise, Dian Fossey (opposite) pursued studies of the endangered mountain gorilla in the highlands of Rwanda, mapping family relationships and interactions. One of her favorite subjects, Digit (above), was killed by poachers; Dian herself was murdered by an unknown assailant in 1985.

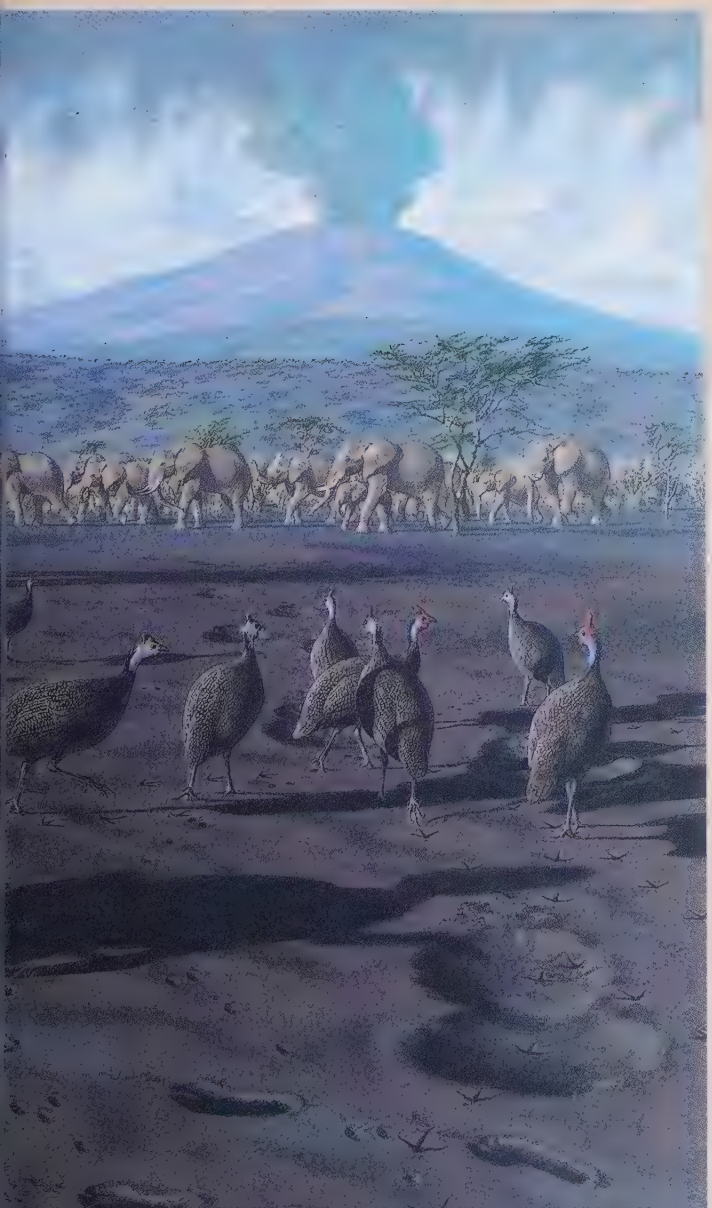
Biruté M. F. Galdikas (right) has accomplished pioneering observations of elusive arboreal orangutans in Kalimantan (Borneo), Indonesia. She also raised orphans confiscated from pet owners for release into the wild.

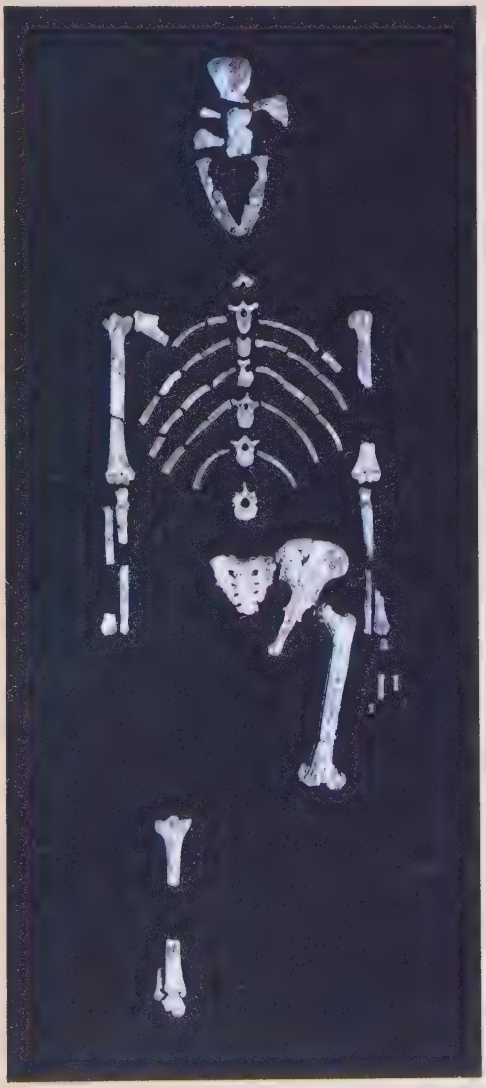
DEREK BRYCESON (TOP); DIAN FOSSEY (ABOVE); ROD BRINDAMOUR (RIGHT); ROBERT M. CAMPBELL



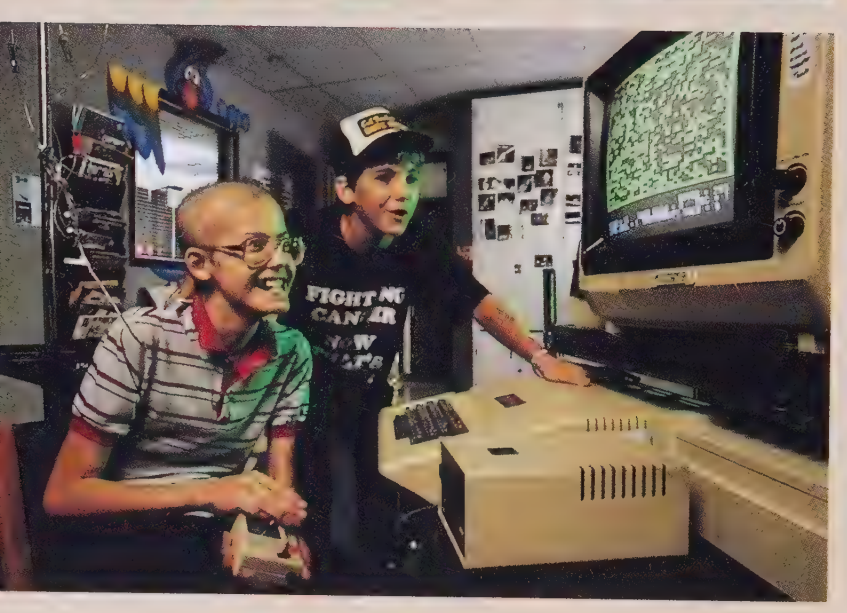
Bringing to light the extraordinary saga of early human species, Louis S. B. Leakey and his son Richard (far left) examine fossils beside Lake Rudolf, Kenya. In this area Richard's team in 1972 located a 2.8-million-year-old skull, designated 1470 (left), earliest evidence yet of the genus **Homo.** *Louis's wife, Mary, found footprints made by bipedal individuals in damp volcanic ash; this re-creation (below) suggests how the prints were made about 3.7 million years ago.*

In 1974 Donald C. Johanson found the most complete early skeleton to date in northeastern Ethiopia. Nicknamed Lucy, the female—since designated **Australopithecus afarensis**—*walked upright some three million years ago.*





GORDON W. GAHAN (TOP LEFT); ROBERT M. CAMPBELL (TOP CENTER); PAINTING BY JAY H. MATTERNESS; DAVID L. BRILL

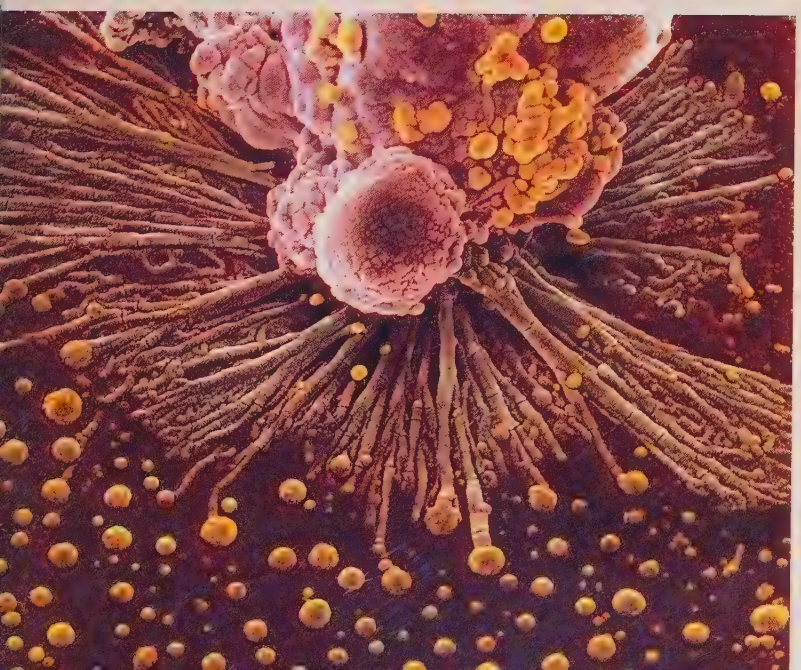


The worlds and wars within our bodies come vividly alive in several GEOGRAPHIC *articles dealing with breakthroughs in medical science. In our June 1986 look at the human immune system, a young cancer patient (above) uses a video game to visualize his defense system's T cells. Spotlighting a number of diseases caused by immune disorders, including AIDS, the article was richly illustrated with pictures of human defense cells, like the blood-cleaning macrophage (right center). Lennart Nilsson, the Swedish master of photomicroscopy who captured those images, was a major contributor to the Society's 1986 book* **The Incredible Machine,** *which included his remarkable views of prenatal life (right).*

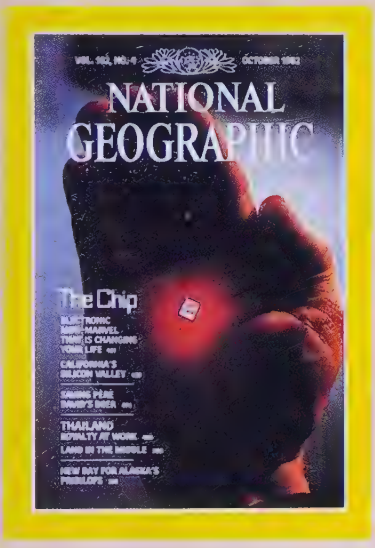
In the January 1987 magazine, photojournalist Howard Sochurek reported on state-of-the-art medical technologies, like magnetic resonance imaging (MRI). Able to view tissue through bone (far right), MRI is but one of many new diagnostic tools that are revolutionizing procedures in operating rooms (upper right) around the world.

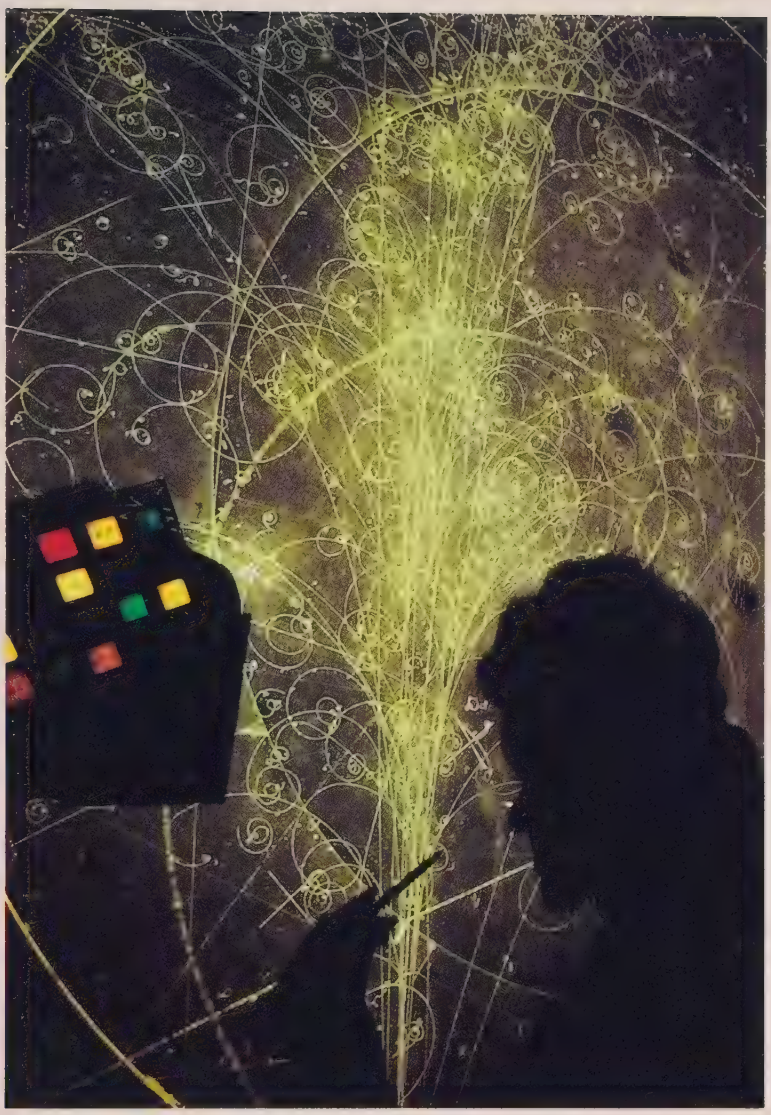
From the labs of theoretical physics other breakthroughs were reported on in our May 1985 article on the atom. By beaming subatomic particles at cancer cells, neutron therapy (top) performs the equivalent of conventional surgery.

KEVIN FLEMING (UPPER LEFT); BILL BALLENBERG (ABOVE LEFT); LENNART NILSSON (ABOVE); LENNART NILSSON/© BOEHRINGER INGELHEIM INTERNATIONAL, GMBH (RIGHT); HOWARD SOCHUREK



Heralding the high-tech 1980s, our October 1982 article on the chip was followed in March 1984 by a survey on lasers and the technology of holograms. On the cover of that issue appeared our first hologram, to be followed by another in November 1985. In celebration of our centennial year, the entire front and back cover of the December 1988 issue consisted of holographic images. At American Bank Note Holographics, Inc., in Elmsford, New York, images of a crystal

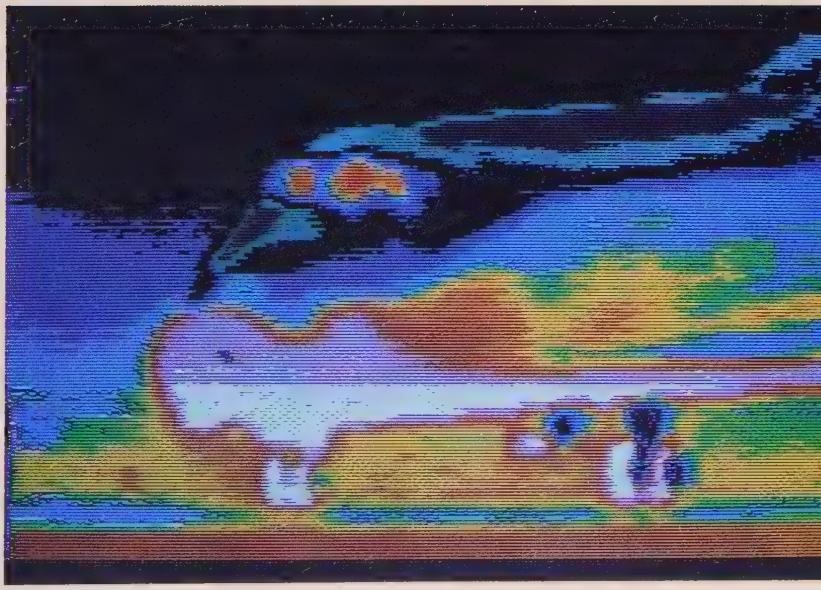


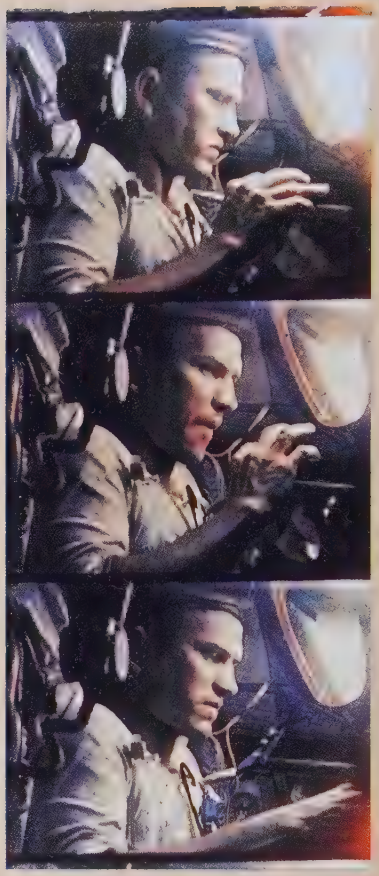


globe were replicated on polyethylene sheets (left). One step in a yearlong process, the images were then metallized, laminated on cover stock, and tinted gold before the binding of 10.9 million copies.

Unimaginable without chip technology, computer-generated images—like the one portraying temperatures on the space shuttle **Columbia** *in our November 1982 issue (right)—have appeared in many of our pages. With the aid of computers, scientists are also delving into the domain of the ultrasmall. In our May 1985 article "Worlds Within the Atom" (top right) the tracks of colliding subatomic particles are plotted.*

SISSE BRIMBERG (LEFT); KEVIN FLEMING (TOP RIGHT); INFRAMETRICS, INC., FROM NASA VIDEOTAPE BY DOUG NELSON



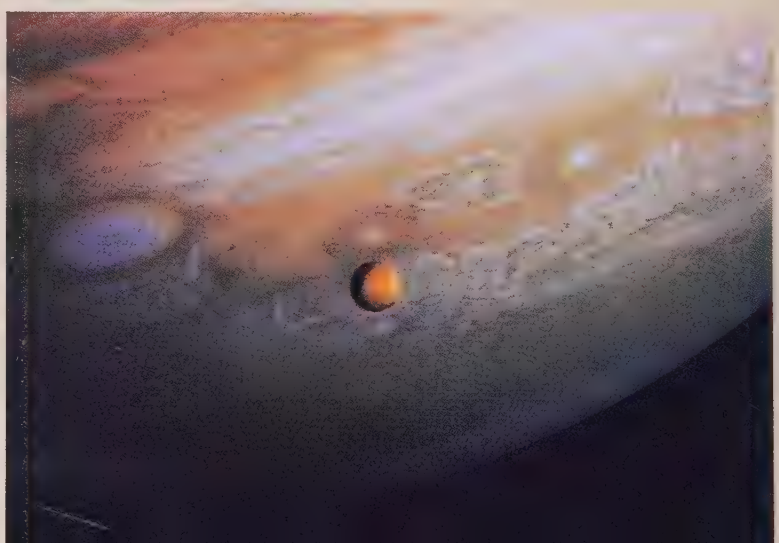


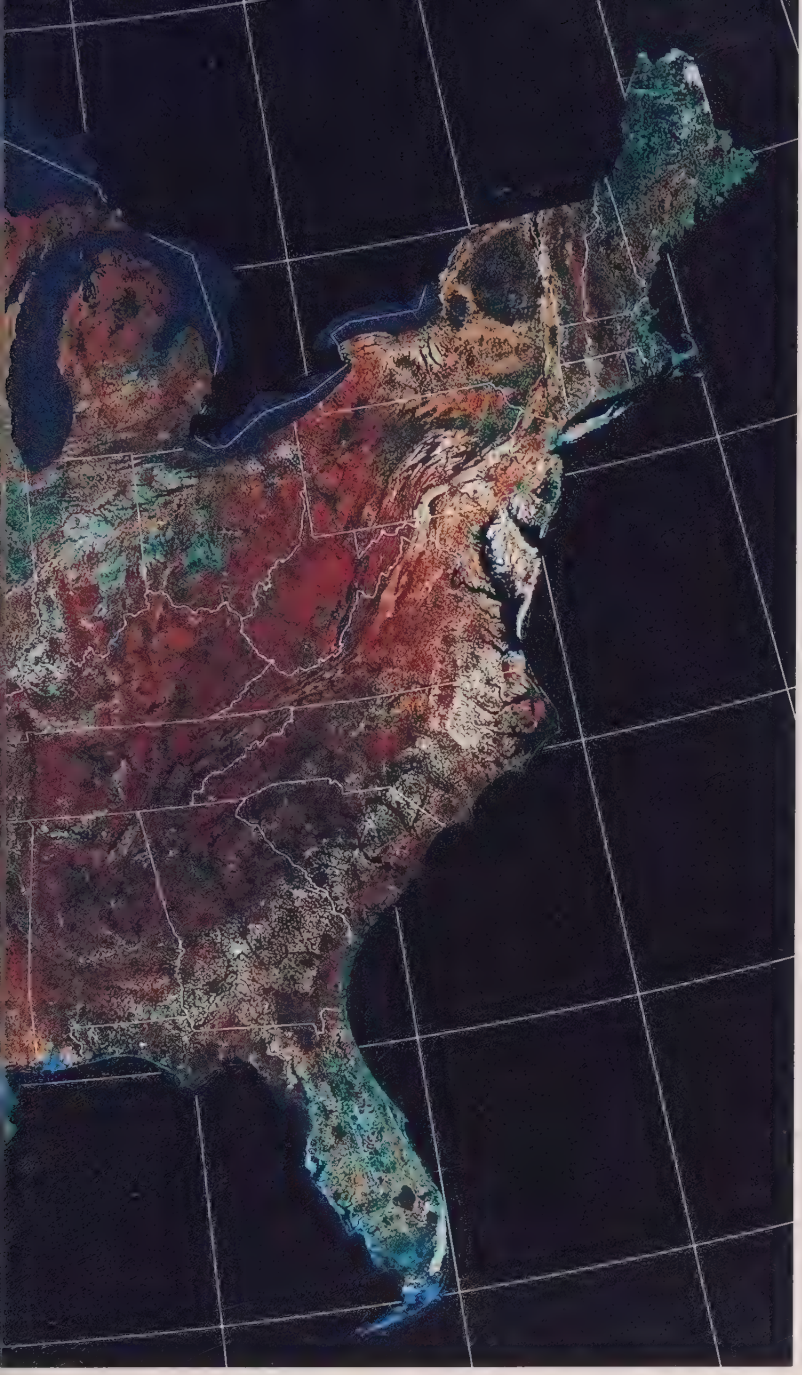
Space is home turf to readers of the GEOGRAPHIC, *which has chronicled events from Sputnik to the shuttle. Four years before man first planted his foot on the moon (below), astronaut Frank Borman (above right) commanded the 1965 flight of Gemini 7 on a mission that saw the first rendezvous of two craft in space. Here he performs a vision test—part of early efforts to gauge the effects of weightlessness on the senses. Borman now serves as a member of the Society's Board of Trustees.*

At work in space, astronauts James D. A. "Ox" van Hoften and William F. Fisher spacewalk outside the shuttle **Discovery** *in 1985. The crew retrieved, repaired, and relaunched a communications satellite. Earth's limb arcs 220 miles below.*

Three years before disaster, **Challenger** *(opposite) poses for the first ship-to-ship photograph of a shuttle in space, taken by a West German satellite that had been put into orbit. The open cargo bay reveals another satellite ready for launch.* **Challenger** *blew up 73 seconds after launch in January 1986.*

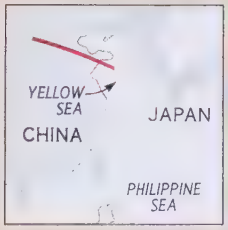
On a tour of Jupiter and Saturn, Voyager 1 sent back this true-color image of the moon Io orbiting Jupiter's bulging girth. ALL BY NASA





The contiguous 48 states appear virtually cloud free in a mosaic of 15 images taken by the National Oceanic and Atmospheric Administration satellites. Vegetation shows as red. A computerized geometric process, developed by the U.S. Geological Survey's EROS Data Center at Sioux Falls, South Dakota, gives the images a high degree of accuracy.

Space-borne radar from the shuttle **Columbia** *in 1981 imaged a swath of China 50 kilometers wide. The pass extended from the Great Wall to the Yellow Sea (inset map). Here in eastern China the clustered villages appear as stars; grid pattern shows field boundaries (bottom left). An earlier pass over the desert to the west proved radar could penetrate sand, revealing ancient drainage patterns of potential value to hydrologists, climatologists, and geologists.*



Longer strips of the radar pass undergo inspection at the Jet Propulsion Laboratory in Pasadena, California (above). Physicist Charles Elachi served as principal investigator of the JPL team that developed the radar.

ROBINSON

VAN DER GRINTEN

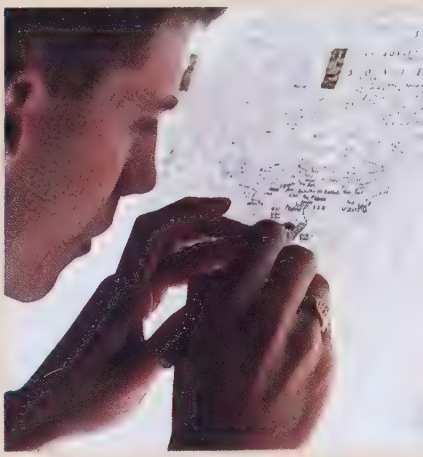
MERCATOR

Which of the three maps at left portrays the earth as it really is? The answer is none, since it is impossible to accurately put the round earth on flat paper—but the Robinson projection comes close.

For centuries mapmakers have grappled with the question of how to map the round earth on flat paper. The Mercator projection, for instance, introduced in 1569 as an aid to navigation, vastly distorts landmasses in the high latitudes—Greenland is 16 times as large as it should be.

Shortly after 1915, when the Cartographic Division was established, the National Geographic Society adopted the projection of Alphons van der Grinten of Chicago, which gave a more realistic view but still greatly enlarged such northern countries as Canada and the U.S.S.R. With an aim toward minimizing distortion, the new world map issued for the Society's 1988 centennial uses a projection devised by Arthur H. Robinson at the University of Wisconsin-Madison.

In addition to mapping the world, the Cartographic Division produces map supplements, such as the 17-map Making of America



series, page maps illustrating magazine stories, atlases, mural maps, and globes. Meticulous research (facing page) and artistic design as well as precise name placement (above) are but three of the steps in the preparation of these products that help our members find their way around the world.

BRETON LITTLEHALES (OPPOSITE AND ABOVE); NGS CARTOGRAPHIC DIVISION

The Future Is an Unbroken Trail

Scouting alternatives for a trek into our second century

By GILBERT M. GROSVENOR PRESIDENT AND CHAIRMAN OF THE BOARD

"NO ONE EVER THROWS IT AWAY. . . ." The rate at which copies of our Society's yellow-bordered official journal accumulate has become part of American folklore.

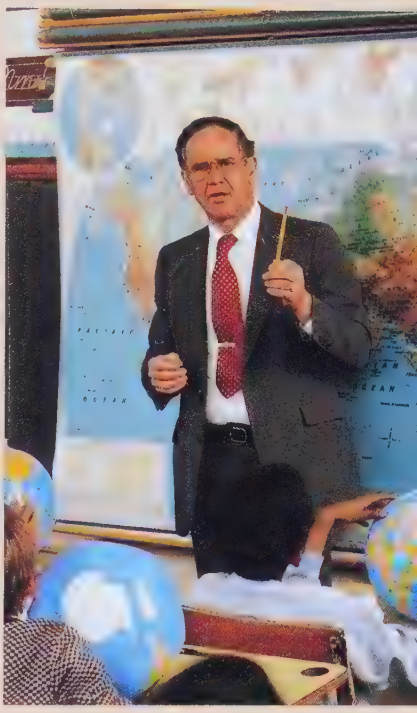
We've been told that all those copies would stretch to the moon and back, that all those pages could cover Connecticut (poor Connecticut!), that the weight of growing stacks of them might affect the balance of earth's rotation on its axis. One enterprising writer even investigated the insulation value of GEOGRAPHICS spread over an attic floor. Conclusion: The high-quality paper that makes for sharp images and long storage life turns out to be a poor retainer of heat.

That's as it may be, but the only insulating role we ever intended for our magazine and Society was to ward off the chill of ignorance.

This index gives entries for all the articles that have appeared in a hundred years of NATIONAL GEOGRAPHIC. It also lists the scores of books the Society has published, except those for the very youngest readers. The index includes titles of our Television Specials and video programs. In a separate section it also lists all the thousands of financial grants we have made to explorers, scientists, and other researchers since 1890.

All those entries show a huge growth of information over the past century, the incredible rate of increase in the production of that information, and the fast-multiplying technologies employed to deliver it. The entries also suggest that no listing, however complete, can draw borders around the Society's present activities, much less its future. For make no mistake, change in the Society, as in the larger world, is not only continuing, it is accelerating.

To imagine what lies ahead, let us consider for a moment the Society's founders and the future they faced a century ago. They too lived in an era of technological change. Labor-saving machines were becoming available, even in the home. On the farm reapers, tractors, and threshers increased efficiency and cut the work load. Some farm laborers left for factory work in cities. There giant steam engines were breathing new life into industry, but the world was already moving from the steam age into one of electricity. Edison's electric light, though new, was increasingly driving back the night, and telephone lines were spiderwebbing city streets. The



To put geography back on the map in U.S. classrooms, the Society launched the Geography Education Program in 1985. Its goals: teacher training and support, innovative educational technologies, public-awareness activities. Taking his message to students, Society President Gilbert M. Grosvenor spoke at Wilkinson Foreign Language Experience School in St. Louis, Missouri, where students were given inflatable globes. "Without geography," he said, "we're nowhere."

SISSE BRIMBERG

Society's founders were among the most highly trained and foresighted people of their time, yet could one blame them if they asked themselves in wonder: "What's next?"

What indeed? The first American automobile had not yet appeared, nor had humans yet left the ground in powered flight. The Kodak box camera was introduced in 1888, the same year that the National Geographic Society was born—a propitious coincidence—but wireless radio broadcasts, much less television, were still decades away. How easy for us now to take for granted changes the founders couldn't anticipate. The past is a road paved with hindsight, while the future is an unbroken trail.

We too ask in wonder: "What's next?" Ours is an era of genetic engineering and microchips, an era when lasers and superconductivity hold promise comparable to electricity and the gasoline engine of a century ago. Yet we do not know the answer to "What's next?" any more than did the founders in their time.

Providing wise counsel through the years, the Board of Trustees (facing page) has strongly encouraged the Society's new commitments to expanded educational activities, research, and exploration. In January 1988 the board approved the establishment of the National Geographic Society Education Foundation with an initial gift of 20 million dollars.

As of December 1988 the Society's trustees were Gilbert M. Grosvenor, Chairman, Owen R. Anderson, Vice Chairman, Lloyd H. Elliott, Vice Chairman, Joe L. Allbritton, Thomas E. Bolger, Frank Borman, Lewis M. Branscomb, Robert L. Breeden, J. Carter Brown, Warren E. Burger, Michael Collins, George M. Elsey, Wilbur E. Garrett, Arthur B. Hanson, Alfred J. Hayre, A. Leon Higginbotham, Jr., Carlisle H. Humelsine, John Jay Iselin, J. Willard Marriott, Jr., Floretta Dukes McKenzie, Melvin M. Payne, former Chairman, Nathaniel P. Reed, B. Francis Saul II, Robert C. Seamans, Jr.

Trustees emeritus included Thomas W. McKnew, former Chairman, Crawford H. Greenewalt, Caryl P. Haskins, Mrs. Lyndon B. Johnson, Curtis E. LeMay, Wm. McChesney Martin, Jr., Laurance S. Rockefeller, Frederick G. Vosburgh, James H. Wakelin, Jr., James E. Webb, and Conrad L. Wirth.

GEORGE C. VON KANTOR
AND JOSEPH S. STANCAMPIANO, BOTH NGS

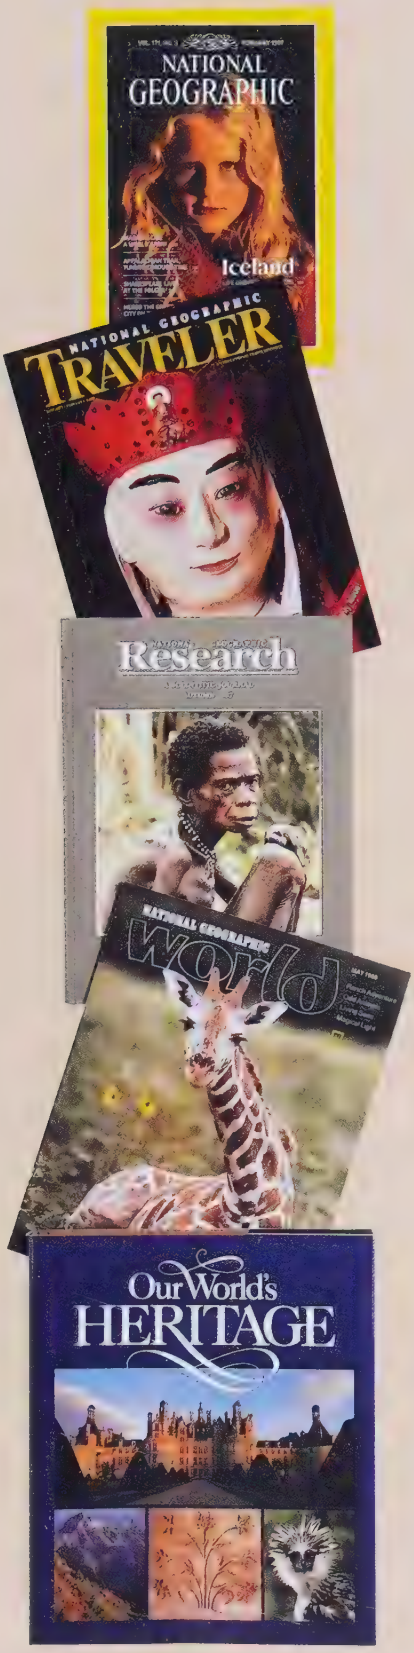
E DO KNOW that this Society has endured because of a willingness from the start to adopt new attitudes and new technologies. We pioneered in the printing of color photography, amid warnings that it would lead to financial ruin. Our television productions became leaders in a new genre of informative programming. We are now in the forefront of developing laser videodiscs that guide junior high and high school students through interactive learning experiences.

Youngsters are also participating in nationwide scientific experiments through a computer network that the Society has begun. Students all over the the country share their findings with other students, often hundreds of miles away, in order that all may contribute to common solutions.

We have always addressed education—in our publications, films, filmstrips, and videos—but never so directly as now. Our centennial gift to the nation has been the creation of the National Geographic Society Education Foundation, with our initial funding of 20 million dollars and the pledge to match an additional 20 million dollars contributed by others. Through the foundation we hope to encourage a renewed emphasis on teaching—and learning—geography. Nationwide surveys funded by the Society have shown the unmistakable need. An appalling geographic illiteracy permeates every age level but is especially acute among the young.

We've set an ambitious goal—erasing that illiteracy from the blackboard by the turn of the 21st century. We're bringing teachers to our headquarters in the nation's capital for intensive month-long geography institutes to improve their knowledge and teaching skills. The program is free to the teachers and their school systems, but we do require one payment. When they go back home, the teacher-graduates must share their new insights and skills with colleagues as well as students. They then become agents of change for better geographic education.

At this writing 27 states have joined with us in organizing



geographic alliances—partnerships of educators, business leaders, and public policymakers dedicated to expanding geographic literacy. We have been instrumental in the creation of those regional alliances, and we continue to assist their growth while promoting the founding of new ones.

IN THIS NEW WAY we are following in the footsteps of the Society's founders: by institutionalizing the importance of geographic knowledge. Such knowledge has always been important but perhaps never more so than now.

Advances in communications are shrinking our world to the point that there are no longer truly remote peoples or isolated problems. Through television, wars in Afghanistan and Angola or unrest in Seoul and South Africa resounds in our living rooms. A starving child on camera in Africa reaches out a bony hand, and millions in the developed world are confronted by that misery and the conditions that cause it. The stock market shudders in New York, and the effects ripple to Tokyo, Hong Kong, Singapore, Paris, and London within a few hours.

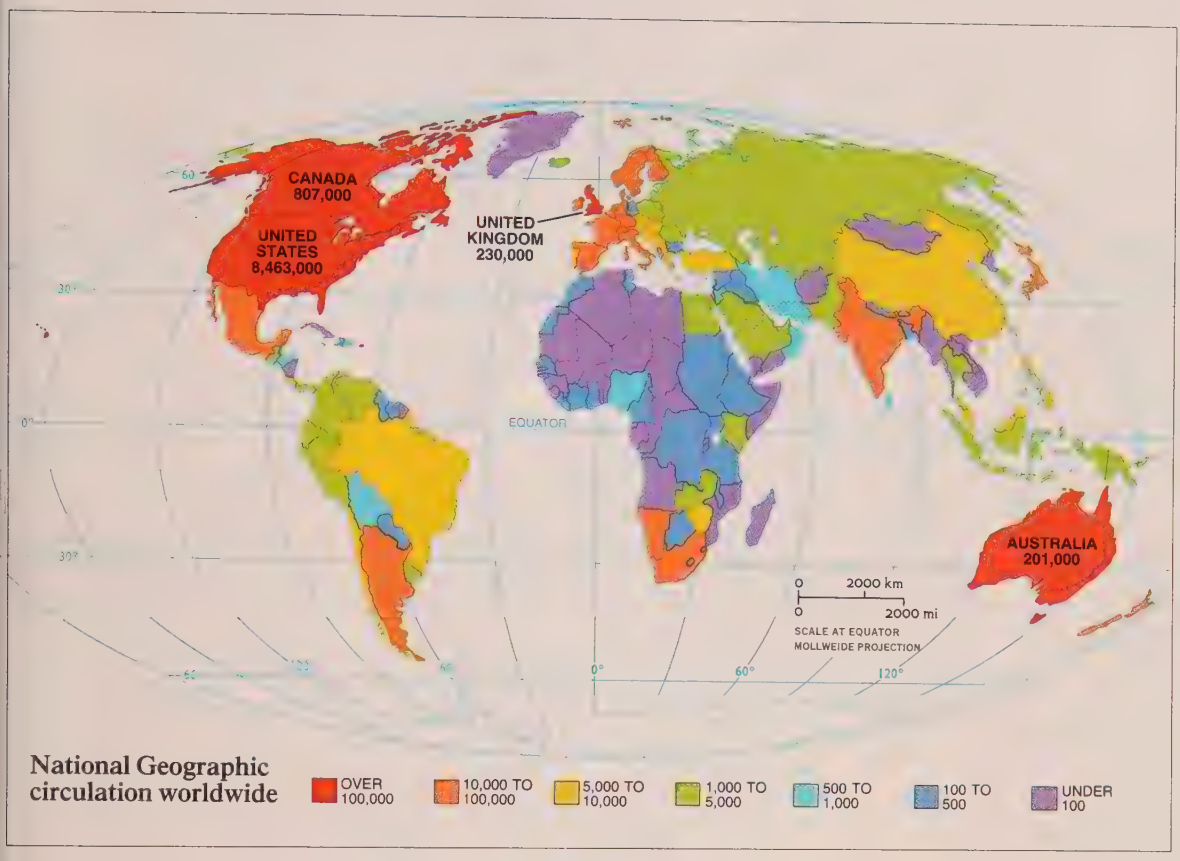
Other markets are affected as well. It's no secret that the United States has lost an edge to other countries in trade. I think that says many things—none of them good—about our ignorance of geography. It's an old axiom that you've got to know your territory to make sales, and Society surveys show convincingly that most Americans don't know the global territory. When some years ago the balance of trade began favoring such nations as Japan and West Germany, there arose a cry for more foreign purchase of American goods.

Complaints came back from potential customers: American business representatives knew little of the customs in countries where they hoped to make sales. Look, in contrast, at what the Japanese accomplished by studying the American auto market and then making inroads with fuel-efficient, dependable, and stylish cars at reasonable prices. It is a success story based in part on knowledge of trends and tastes in a nation—the United States—a third of the way around the globe.

Just as Japanese auto—and electronics—makers adopted American manufacturing and marketing techniques to crack the American market, learning more about the world can make us more competitive. It took an American born in the Netherlands to notice that the eels swimming in the Potomac River had more potential than ending up as inexpensive crab bait. Soon he was flying eels across the Atlantic to help satisfy the demand of European gourmets.

To compete in world markets, producers cannot rely on the odd chance that they may have specialized knowledge. Suppose farmers on the Delmarva Peninsula tried to compete effectively in the international market for fresh produce. Do Saudi Arabians like asparagus? Fresh? Do they already grow it? Would they pay a premium for it? Such questions apply in manufacturing and services markets as well as in agriculture.

Geographic knowlege is practical knowledge, and a listing of



Spread across the globe (above), the Society's 10.5 million members share a curiosity about one another and the world in which we live. This curiosity is answered by the Society's four magazines, books, television films, maps, and educational materials, which entertain and inform from childhood through old age. Through agreements with foreign publishers, a growing number of these products are also being translated into such languages as Italian, Swedish, Chinese, and Japanese.

NGS CARTOGRAPHIC DIVISION

a region's cultural practices can be just as important in a computer-maintained data base as a list of shipping rates and banking regulations. In the new era of "What's next?" for the Society, I see nothing inherently wrong with our branching out into providing information related to economic geography.

There are, of course, far more serious matters to address than outlets for products. We on planet earth face sobering environmental problems that our Society's founders could not have imagined. While some among them were concerned about the loss of American forests to timber cutting, they could hardly have credited the importance we now attach to the world's fast-disappearing tropical rain forests.

THE FOUNDERS' TIME was one of reclaiming land by draining swamps; ours is a time of realizing the value of wetlands even as their numbers and extent decline. Theirs was a time of great improvements in city water and sanitation systems; ours is a time of hazardous wastes and air pollution reaching even the most isolated locations in the world.

Theirs was a time when the far reaches of the globe seemed remote. Ours is a time when many of the most serious problems related to geography proclaim: *There are no distant places.* What could be more basic to geography than trying to understand the alteration

of climate by the greenhouse gases—or the depletion of the ozone layer that protects life from the sun's most dangerous ultraviolet rays? Both problems are caused by the release of gases from human activity. Both require massive changes in the materials we use and the fuels we burn to avert eventual disaster.

As you will discover in this index, the Society and its magazine have tried to stay on top of environmental crises for generations. You can find a listing for an article called "Saving the Forests," published in 1907. Another on pollution of the Potomac River is dated 1897. The possibility of future petroleum shortages was first addressed in the February 1920 issue.

We will have to do even more in the future in all our Society's programs and media. The depredations to our planet are not going to disappear easily or soon. Whole patterns of consumption may have to change. What will happen in this age of information when the people of Africa and Asia fully realize that the developed world controls 80 percent of earth's resources—though it contains about a quarter of the population?

That question cannot now be answered. But it is within the mission of the National Geographic Society to raise such questions, so that we can all think about alternative futures before a time without choice is upon us.

It is not within the scope of this Society's charter to become an advocate of one course or another. But we are going to report information as the facts warrant and through whatever media are the most appropriate. Sometimes the information will be disturbing, but as it affects all of us and our world, we call such reporting the responsible diffusion of geographic information.

I expect an index like this one will, a hundred years hence, be rife with stories about how the world dealt with environmental problems and social inequities. Those concerns will doubtless change over time, and such an index, or its bicentennial equivalent, may itself be vastly different.

TECHNOLOGY RUSHES ON. Instantaneous transmission of photographic images from the field to our headquarters is already very near. Film itself may soon become largely a matter of antiquarian interest. Our presses run faster all the time, even as printing quality improves. Yet someday the presses may stop. Direct transfer by laser of images to pages is on the horizon, and no one knows what is over that horizon.

Future Society members may receive an electronic module that they can insert into a device to display still or moving images, to hear sounds of human and other voices, and to display text or retrieve it in some new equivalent of printing.

We recognize that, like those who went before us, we must adjust to changing times and developing technologies. We welcome the next "What's next?" We will do what is necessary to assure that our mission and message will be renewed down the decades of the Society's second century.

From the crocodiles of Ethiopia to the Baka Pygmies of Cameroon, the cameras of the Society's Television Division cover it all. Our one-hour Specials, appearing since 1965, are among the most honored documentaries ever broadcast. Since the 1985 debut of National Geographic EXPLORER, a weekly two-hour, magazine-format program on cable, the Society has increased its programming to a hundred hours a year. Films from both EXPLORER and the Specials have also been released as videos.

JONATHAN BLAIR (LEFT); LISA SILCOCK, DJA RIVER FILMS

In the Waiting Room

In Worcester, Massachusetts,
I went with Aunt Consuelo
to keep her dentist's appointment
and sat and waited for her
in the dentist's waiting room.
It was winter. It got dark
early. The waiting room
was full of grown-up people,
arctics and overcoats,
lamps and magazines.
My aunt was inside
what seemed like a long time
and while I waited I read
the *National Geographic*
(I could read) and carefully
studied the photographs:
The inside of a volcano,
black, and full of ashes;
then it was spilling over
in rivulets of fire.
Osa and Martin Johnson
dressed in riding breeches,
laced boots, and pith helmets.
A dead man slung on a pole
—"Long Pig," the caption said.
Babies with pointed heads
wound round and round with string;
black, naked women with necks
wound round and round with wire
like the necks of light bulbs.
Their breasts were horrifying.
I read it right straight through.
I was too shy to stop.
And then I looked at the cover:
the yellow margins, the date.

Suddenly, from inside,
came an *oh!* of pain
—Aunt Consuelo's voice—
not very loud or long.
I wasn't at all surprised;
even then I knew she was
a foolish, timid woman.
I might have been embarrassed,
but wasn't. What took me
completely by surprise
was that it was *me:*
my voice, in my mouth.
Without thinking at all
I was my foolish aunt,
I—we—were falling, falling,
our eyes glued to the cover
of the *National Geographic,*
February, 1918.

I said to myself: three days
and you'll be seven years old.
I was saying it to stop
the sensation of falling off
the round, turning world
into cold, blue-black space.
But I felt: you are an *I,*
you are an *Elizabeth,*
you are one of *them.*
Why should you be one, too?
I scarcely dared to look
to see what it was I was.
I gave a sidelong glance
—I couldn't look any higher—
at shadowy gray knees,
trousers and skirts and boots
and different pairs of hands
lying under the lamps.
I knew that nothing stranger
had ever happened, that nothing
stranger could ever happen.

Why should I be my aunt,
or me, or anyone?
What similarities—
boots, hands, the family voice
I felt in my throat, or even
the *National Geographic*
and those awful hanging breasts—
held us all together
or made us all just one?
How—I didn't know any
word for it—how "unlikely"...
How had I come to be here,
like them, and overhear
a cry of pain that could have
got loud and worse but hadn't?

The waiting room was bright
and too hot. It was sliding
beneath a big black wave,
another, and another.

Then I was back in it.
The War was on. Outside,
in Worcester, Massachusetts,
were night and slush and cold,
and it was still the fifth
of February, 1918.

PAINTING BY JAMES M. GURNEY

STATE
THE NATIONAL GEOGRAPHIC MAGAZINE
100 Years
Reporting on the world and all that's in it

January 13, 1888
Thirty-three founders—scientists, scholars, military men—meet at the Cosmos Club, then on Lafayette Square in Washington, D.C., to create "a society for the increase and diffusion of geographic knowledge."

October 1888
The first issue of NATIONAL GEOGRAPHIC magazine is sent to 165 charter members.

October 1889
The magazine publishes its first map supplement, showing the Asheville, North Carolina, area.

1890-91
The first National Geographic Society-sponsored expedition maps the Mount St. Elias region, in Alaska, and discovers Canada's highest peak, which the team names Mount Logan.

January 7, 1898
Alexander Graham Bell assumes National Geographic Society's presidency.

April 1, 1899
Gilbert Hovey Grosvenor joins the staff as Assistant Editor.

February 1903
Gilbert H. Grosvenor is appointed Editor of NATIONAL GEOGRAPHIC.

Fall 1903
The National Geographic Society moves to a new headquarters in Washington, D.C., built with donations given by the family of first Society President, Gardiner Greene Hubbard.

January 1905
Gilbert H. Grosvenor fills 11 pages of the magazine with photographs of Lhasa in Tibet. Expecting to be fired, he is instead congratulated by Society members.

July 1906
Grosvenor publishes George Shiras 3d's pioneering flash photographs of animals at night. Two Society board members resign, claiming the magazine is turning into a "picture book."

April 1909
Leader of a Society-supported expedition, Robert E. Peary claims to be the first to reach the North Pole.

February 1910
The magazine adopts a cover design whose border is adorned with oak and laurel leaves, acorns, and four hemispheres.

November 1910
The GEOGRAPHIC publishes 24 pages of hand-tinted photographs, William W. Chapin's "Scenes in Korea and China," far more than any other magazine had published.

1912-15
Society-supported expeditions in the Peruvian Andes led by Hiram Bingham clear and excavate Machu Picchu, lost mountaintop city of the Inca.

1915
The Cartographic Division is established to increase production of maps under direct Society control.

1916
In a Society-sponsored expedition Robert F. Griggs discovers, names, and explores the Valley of Ten Thousand Smokes in a volcanic region near Mount Katmai, Alaska. Within two years a million acres is set aside as Katmai National Monument.

May 1918
"Map of the Western Theatre of War" is published, a tour de force of detailed cartography.

1919
National Geographic *School Bulletin* begins publication.

1920
Gilbert H. Grosvenor becomes President of the Society, a post he is to hold for 34 years.

January 1927
The magazine publishes the first natural-color underwater photographs, taken by staff photographer Charles Martin and scientist W. H. Longley.

November 29, 1929
Richard E. Byrd is the first to fly over the South Pole; he photographs 160,000 square miles of Antarctica from the air.

1930
Melville Bell Grosvenor makes the first natural-color aerial photographs to be published.

April 1931-February 1932
Staff writer-photographer Maynard Owen Williams joins the Citroën-Haardt expedition across Asia from the Mediterranean to the Yellow Sea.

August 15, 1934
In a Society-sponsored investigation, William Beebe and Otis Barton descend in a bathysphere to a record depth of 3,028 feet in the sea off Bermuda.

November 11, 1935
Backed by the Society, U.S. Army Air Corps Capts. Albert W. Stevens and Orvil A. Anderson ascend in the stratospheric balloon *Explorer II* to a record 72,395 feet.

1938-1946
Matthew W. Stirling leads Society-sponsored expeditions that uncover thousand-year-old La Venta, an Olmec site in southern Mexico.

1941
The Society opens its storehouse of photographs, maps, and other cartographic data to President Roosevelt and the U.S. armed forces to aid war efforts.

July 1942
The first cover illustration appears, a U.S. flag.

October 1952
The magazine publishes the first of many articles on undersea exploration by Jacques-Yves Cousteau.

May 1954
John Oliver La Gorce is elected President and Editor.

May 1956
Monumental National Geographic Society-Palomar Observatory Sky Survey is completed—and remains an important basic resource of astronomers.

January 1957
Melville Bell Grosvenor becomes President and Editor.
Luis Marden of the foreign editorial staff finds the 167-year-old remains of the British armed merchant vessel *Bounty* off Pitcairn Island.
The Society's modern Book Service is inaugurated with *The World in Your Garden.*

September 1959
Color photographs begin to appear regularly on the GEOGRAPHIC's cover.

September 1960
The Society reports on fossil remains of a hominid that lived in Africa more than 1.75 million years ago. Called *Zinjanthropus* by discoverers Louis and Mary Leakey, the find opens a new era in paleoanthropology.

1961
A National Geographic Society grant assists Jane Goodall in her study of chimpanzees in Tanzania's Gombe National Park.

May 1961
The Society's first political globe is introduced.

June 1962
John Glenn carries a National Geographic Society flag on the first manned U.S. orbital space flight.
The Society publishes the official White House guidebook, first in a series of public-service books.

May 1963
First Americans attain the summit of Mount Everest in a Society-supported expedition.

June 1963
The first bound *Atlas of the World* is published.

Summer 1963
A National Park Service study to save redwoods is funded by a Society grant. The survey aids establishment of Redwood National Park in California.
Society-sponsored investigation finds evidence in Newfoundland of Norse settlement in North America five centuries before Columbus.

January 18, 1964
New ten-story headquarters building in Washington, D.C., is dedicated by President Lyndon B. Johnson.

July 1965
The Special Publications Division is established.

September 10, 1965
"Americans on Everest" inaugurates a series of hour-long National Geographic Television Specials, first shown on CBS.

1967
Dian Fossey begins a Society-funded study of mountain gorillas in Rwanda.
Frederick G. Vosburgh named Editor.
Ocean-floor relief-map series is instituted.

1968
Society membership exceeds six million, having increased nearly threefold in a decade.

January 1968
First Society-produced filmstrips offered as educational tools for schools.

October 1968
More than a thousand employees move into a new Membership Center Building in Gaithersburg, Maryland.

February 1969
The Cartographic Division produces the first map to show the entire lunar surface on a single sheet.

July 1969
Apollo 11 astronauts carry National Geographic Society flag to the moon.

June 1970
Gilbert M. Grosvenor is elected Editor.
Traveler's map supplements begun.

March 1971
First ethnic magazine supplement map, "The Peoples of Mainland Southeast Asia," launches political and cultural map series.

September 1975
National Geographic WORLD replaces the *School Bulletin* as the magazine for young people. Circulation reaches 1.3 million by 1976.

October 28, 1975
The Society begins a series of Specials on public television with "The Incredible Machine," about the human body. It becomes the most widely watched program ever shown on PBS.

Fall 1975
In anticipation of the nation's Bicentennial, the Book Service publishes *We Americans*. By early 1989 more than 1.2 million copies of the Society's all-time best-selling book had been printed.

Summer 1977
Magazine printing changes to gravure presses in Mississippi.

April 1979
Mary Leakey reports discovery of 3.6-million-year-old footprints in the volcanic ash of a riverbed in Tanzania. They are from upright-walking ancestors of modern humans.

August 1980
Wilbur E. Garrett becomes the magazine's Editor, succeeding Gilbert M. Grosvenor, who becomes President.

February 1981
A Special Report on Energy is published as a 13th issue of the magazine and sent without cost to Society members.

December 1982
The magazine details discovery of skeletons unearthed at Herculaneum, a Roman town buried with Pompeii in the A.D. 79 eruption of Mount Vesuvius.

1984
Undersea archaeological pioneer George F. Bass, supported by the Society, discovers in a 3,400-year-old wrecked ship off the coast of southern Turkey the most extensive collection of Bronze Age trade goods yet found.

March 1984
A holographic image of an eagle appears on NATIONAL GEOGRAPHIC's cover, pioneering the use of holograms in large-circulation magazines.
NATIONAL GEOGRAPHIC TRAVELER, a magazine devoted to educational and practical aspects of travel, is launched.

June 19, 1984
A seven-story addition to the Society's headquarters complex is dedicated by President Ronald Reagan.

Winter 1985
A quarterly scholarly journal, NATIONAL GEOGRAPHIC RESEARCH, is begun to convey findings of Society-sponsored and other research projects.

April 7, 1985
The EXPLORER series has its premier on cable television; it becomes a two-hour weekly feature on SuperStation TBS in 1986.

April 1985
The Geography Education Program is initiated to emphasize the importance of geography's role in the modern world and to improve its instruction, especially in public schools.

September 11, 1985
Details of the discovery of R.M.S. *Titanic* announced at Society headquarters by Robert D. Ballard.

May 1, 1986
Six members of the Steger International Polar Expedition—including one woman—are the first to reach the North Pole by dogsled without resupply since Peary's attempt.

October 1986
Senior Associate Editor Joseph Judge reports that six lines of evidence point to Samana Cay in the Bahamas as the first landfall of Christopher Columbus in the New World.

October 1987
Results of a smell test—largest scientific survey of its kind, which appeared in the September 1986 NATIONAL GEOGRAPHIC—are published.
The magazine is sent to 10.5 million members.

January 1988
The National Geographic Society Education Foundation is established to raise funds and provide grants for geography education. Initial funding is 20 million dollars with another 20 million dollars available to match contributions from other sources.

April 1988
The magazine reports discovery and publishes photographs of a 4,600-year-old boat entombed in a pit beside the Great Pyramid of Khufu in Giza, Egypt.

October 1988
New monthly Geographica section, illustrated with photographs and maps, is launched in the magazine; it includes geographic news briefs and updates of previous stories.

Fall 1988
The magazine celebrates the centennial of the Society with four special issues highlighting its history, the peopling of the earth, exploration, and the environment.
The December cover is made up entirely of holographic images.

Exploring the Farthest Reaches of Space. By George O. Abell. Contents: National Geographic-Palomar Sky Survey. 782-790, *Dec. 1956*

Completing the Atlas of the Universe (National Geographic Society-Palomar Observatory Sky Survey). By Ira Sprague Bowen. Included: Sky Survey Plates Unlock Secrets of the Stars. 186-187. NGS research grant. 185-190, *Aug. 1955*

Twelve National Geographic Society Scientific Projects Under Way. Included: Aurora Borealis, Cosmic rays, Mars expedition, Sky Survey, Zodiacal light observations. NGS research grant. 869-870, *June 1954*

Current Scientific Projects of the National Geographic Society. Included: Cosmic ray research; Sky Survey. NGS research grant. 143-144, *July 1953*

First Photographs of Planets and Moon Taken with Palomar's 200-inch Telescope. By Milton L. Humason. 125-130, *Jan. 1953*

Our Universe Unfolds New Wonders (National Geographic-Palomar Sky Survey). By Albert G. Wilson. NGS research grant. 245-260, *Feb. 1952*

Mapping the Unknown Universe. By F. Barrows Colton. NGS research grant. 401-420, *Sept. 1950*

Split-second Time Runs Today's World. By F. Barrows Colton and Catherine Bell Palmer. Included: Study by astronomers at the Naval Observatory determines the world's measure of time. 399-428, *Sept. 1947*

The Heavens Above: On Land, Sea, and in the Air the Stars Serve Modern Man as Map, Compass, and Clock. By Donald H. Menzel. Included: Star charts designed by author. Drawings of the constellations by Carlotta Gonzales Lahey. 97-128, *July 1943*

News of the Universe: Mars Swings Nearer the Earth, Sunspots Wane, and a Giant New Telescopic Eye Soon Will Peer Into Unexplored Depths of Space. By F. Barrows Colton. Paintings by Charles Bittinger. 1-32, *July 1939*

Unfurling Old Glory on Canton Island. Painting by Charles Bittinger. Included: Photo of the eclipse, showing the corona. 753-760, *June 1938*

Nature's Most Dramatic Spectacle (Eclipse). By S. A. Mitchell. 361-376, *Sept. 1937*

Eclipse Adventures on a Desert Isle (Canton). By J. F. Hellweg. 377-394, *Sept. 1937*

First natural-color photograph of an eclipse ever reproduced, showing the corona. By Irvine C. Gardner. 178, *Feb. 1937*

Observing an Eclipse in Asiatic Russia. By Irvine C. Gardner. 179-197, *Feb. 1937*

Photographing the Eclipse of 1932 from the Air: From Five Miles Above the Earth's Surface, the National Geographic Society-Army Air Corps Survey Obtains Successful Photographs of the Moon's Shadow. By Albert W. Stevens. 581-596, *Nov. 1932*

Observing a Total Eclipse of the Sun: Dimming Solar Light for a Few Seconds Entails Years of Work for Science and Attracts Throngs to "Nature's Most Magnificent Spectacle." By Paul A. McNally. 597-605, *Nov. 1932*

Interviewing the Stars: How Twentieth Century Astronomers are Inducing the Heavens to Reveal Their Secrets. By William Joseph Showalter. 97-122, *Jan. 1925*

Exploring the Glories of the Firmament. By William Joseph Showalter. 153-181, *Aug. 1919*

The Magic Mountain (Mount Wilson, California). By J. N. Patterson. 457-468, *July 1908*

The American Eclipse Expedition. By Colby M. Chester. 589-612, *Nov. 1906*

To Observe Solar Eclipse. 88, *Feb. 1905*

Special Telegraphic Time Signal from the Naval Observatory. 411-415, *Oct. 1904*

Girdling the Globe. 236, *May 1904*

The Manila Observatory. By José Algué. 427-438, *Nov. 1900*

The National Geographic Society's Eclipse Expedition to Norfolk, Va. By Marcus Baker. 320, *Aug. 1900*

Scientific Work of the National Geographic Society's Eclipse Expedition to Nofolk, Va. By Simon Newcomb. 321-324, *Aug. 1900*

The Total Eclipse of the Sun, May 28, 1900. By F. H. Bigelow. 33-34, *Jan. 1900*

EXCAVATIONS of M. de Morgan at Susa. 315, *Aug. 1901*

An **EXCITING** Year of Discovery: President's Report to Members. By Gilbert M. Grosvenor. 820-824, *Dec. 1982*

***EXCURSION** to Enchantment: A Journey to the World's Most Beautiful Places.* Included: East Africa, Loire Valley, Bhutan, Chile-Argentina Lake District, Alaska's Inside Passage, and the Caribbean. 200 pages. *1988*

EXMOOR PONIES:

England's Wild Moorland Ponies. 129-136, *Jan. 1946*

The **EXODUS:**

Lost Outpost of the Egyptian Empire. By Trude Dothan. Photos by Sisse Brimberg. Paintings by Lloyd K. Townsend. 739-769, *Dec. 1982*

Eternal Sinai. By Harvey Arden. Photos by David Doubilet and Kevin Fleming. 420-461, *Apr. 1982*

In Search of Moses. By Harvey Arden. Photos by Nathan Benn. Included: Map of Sinai Peninsula indicating two possible routes. 2-37, *Jan. 1976*

East of Suez to the Mount of the Decalogue: Following the Trail Over Which Moses Led the Israelites from the Slave-Pens of Egypt to Sinai. By Maynard Owen Williams. 709-743, *Dec. 1927*

The Route Over Which Moses Led the Children of Israel Out of Egypt. By Franklin E. Hoskins. 1011-1038, *Dec. 1909*

EXOTIC-BIRD TRADE:

Wild Cargo: the Business of Smuggling Animals. By Noel Grove. Photos by Steve Raymer. 287-315, *Mar. 1981*

EXOTIC Birds in Manhattan's Bowery. By Paul A. Zahl. 77-98, *Jan. 1953*

An **EXOTIC** New Oriole Settles in Florida. By Charles M. Brookfield and Oliver Griswold. 261-264, *Feb. 1956*

The **EXPANSION** of England. By Edwin D. Mead. 249-263, *July 1900*

EXPEDITIONS:

Expedition to the Land of the Tiwi. By Charles P. Mountford. 417-440, *Mar. 1956*

Quinine Hunters in Ecuador. By Froelich Rainey. 341-363, *Mar. 1946*

Earth's Most Primitive People: A Journey with the Aborigines of Central Australia. By Charles P. Mountford. 89-112, *Jan. 1946*

Fit to Fight Anywhere (Quartermaster Corps Expedition). By Frederick Simpich. 233-256, *Aug. 1943*

Climbing Mighty Minya Konka: Americans First Scaled Mountain That Now Is Landmark of China's New Skyway. By Richard L. Burdsall and Terris Moore. 625-650, *May 1943*

Expedition Unearths Buried Masterpieces of Carved Jade (Cerro de las Mesas, Mexico). By Matthew W. Stirling. 277-302, *Sept. 1941*

By Coolie and Caravan Across Central Asia: Narrative of a 7,900-Mile Journey of Exploration and Research Over the "Roof of the World," from the Indian Ocean to the Yellow Sea (Morden-Clark Asiatic Expedition). By William J. Morden. 369-431, *Oct. 1927*

Through the Deserts and Jungles of Africa by Motor: Caterpillar Cars Make 15,000-Mile Trip from Algeria to Madagascar in Nine Months. By Georges-Marie Haardt. 651-720, *June 1926*

The Conquest of the Sahara by the Automobile. 87-93, *Jan. 1924*

The Crosby Expedition to Tibet. 229-231, *May 1904*

Expedition into Texas of Fernando del Bosque, Standard-Bearer of the King, Don Carlos II, in the Year 1675. Translated from an Old, Unpublished Spanish Manuscript. By Betty B. Brewster. 339-348, *Sept. 1903*

Expedition to Turkestan. 215, *May 1903*

Expeditions in the Arctic and Antarctic. 179-180, *May 1902*

A Yukon Pioneer, Mike Lebarge. Note: First trip from headwaters of the Yukon to the sea. 137-139, *Apr. 1898*

The Mt. St. Elias Expedition of Prince Luigi Amadeo of Savoy, 1897. By E. R. Scidmore. 93-96, *Mar. 1898*

Some Recent Geographic Events. By John Hyde. Included: Andrée Balloon Expedition; de Gerlache

Desert police inspect French-built tractors during a pioneering expedition by motor vehicle across the Sahara in 1922. ANDRE CITROEN

Expedition; Jackson-Harmsworth Expedition; Peary Expedition to Greenland; Hedin Expedition to Central Asia; Duke of the Abruzzi Expedition to summit of Mount St. Elias; Mazama Expedition to summit of Mount Rainier. 359-362, *Dec. 1897*

Hatcher's Work in Patagonia. By John Hyde. 319-322, *Nov. 1897*

Charles Francis Hall and Jones Sound. By Adolphus W. Greely. 308-310, *Sept. 1896*

Spottswood's Expedition of 1716. By William M. Thornton. 265-269, *Aug. 1896*

The Antarctic Continent. By Cyrus C. Babb. 217-223, *Dec. 29, 1894*

Recent Explorations in Alaska. By Eliza Ruhamah Scidmore. 173-179, *Jan. 31, 1894*

An Expedition through the Yukon District. By Charles Willard Hayes. 117-159, *May 15, 1892*

The Cartography and Observations of Bering's First Voyage. By Adolphus W. Greely. 205-230, Jan. 28, 1892; *Feb. 19, 1892*

The Heart of Africa. By E. C. Hore. 238-247, *Feb. 19, 1892*

An Expedition to Mount St. Elias, Alaska. 53-200. By Israel C. Russell. Contents: Introduction: The Southern Coast of Alaska, 55-57; Part I: Previous Explorations in the St. Elias Region, 58-74; Part II: Narrative of the St. Elias Expedition of 1890, 75-166; Part III: Sketch of the Geology of the St. Elias Region, 167-175; Part IV: Glaciers of the St. Elias Region, 176-188; Part V: Height and Position of Mount St. Elias, 189-191; Appendices: Official Instructions Governing the Expedition, 192-194; Report on Topographic Work, 195; Report on Auriferous Sands from Yakutat Bay, 196-198; Report on Fossil Plants, 199-200, *May 29, 1891*

Summary of Reports on the Mt. St. Elias Expedition. 302-304, *Apr. 1891*

A Critical Review of Bering's First Expedition, 1725-30, Together with a Translation of His Original Report Upon It. With a Map. By William H. Dall. Supplementary Note by Marcus Baker, On the Alleged Observation of a Lunar Eclipse by Bering in 1728-9. 111-169, *May 1890*

On the Telegraphic Determinations of Longitude by the Bureau of Navigation. By J. A. Norris. 1-30, *Apr. 1890*

Report–Geography of the Land. By Herbert G. Ogden. 31-48, *Apr. 1890*

Africa, Its Past and Future: Stanley Expedition. By Gardiner G. Hubbard. 99-124, *Apr. 1889*

The Geography of Japan: With Special Reference to Its Influence on the Character of the Japanese People. By Walter Weston. 45-84, *July 1921*
The Probable Effect of the Panama Canal on the Commercial Geography of the World. By O. P. Austin. 245-248, *Feb. 1914*
Recent Geographic Advances, Especially in Africa. By Adolphus W. Greely. 383-398, *Apr. 1911*
Imagination and Geography. 825, *Dec. 1907*
International Flat Globe and Geographical History. 281-282, *Apr. 1907*
A Dictionary of Universal Geography. 114, *Feb. 1906*
Geographical Exploration: Its Moral and Material Results. By Adolphus W. Greely. 1-5, *Jan. 1906*
Geography. By Sir W.J.L. Wharton. 483-498, *Nov. 1905*
Some Lessons in Geography. By Edward Atkinson. 193-198, *Apr. 1905*
Geography and Culture. 70-71, *Feb. 1905*
Bearing of Physiography Upon Suess' Theories. By W. M. Davis. 430, *Oct. 1904*
Some Early Geographers of the United States. By Colby M. Chester. 392-404, *Oct. 1904*
The Geographical Pivot of History (Steppes of Central Asia). By H. J. Mackinder. 331-335, *Aug. 1904*
The Geography of Alaska. By Alfred H. Brooks. 213-219, *May 1904*
The Geographical Distribution of Insanity in the United States. By William A. White. 361-378, *Oct. 1903*
An Introduction to Physical Geography. By Grove Karl Gilbert and Albert Perry Brigham. 21-26, *Jan. 1903*
German Geographers and German Geography. By Martha Krug Genthe. 324-337, *Sept. 1901*
The Geography of Abyssinia. 274-276, *July 1901*
Advances in Geographic Knowledge During the Nineteenth Century. By Adolphus W. Greely. 143-152, *Apr. 1901*
Geographic Facts from Report of the Taft Philippine Commission. 114-119, *Mar. 1901*
Geography at the British Association. 475-478, *Dec. 1900*
Apperception in Geography. By M. E. Kelton. 192-199, *May 1900*
Practical Exercises in Geography. By W. M. Davis. 62-78, *Feb. 1900*
The Rational Element in Geography. By W. M. Davis. 466-473, *Nov. 1899*
Geographical Congress at Berlin. 296, *Aug. 1899*
Geographical Aspects of the Monroe Doctrine. 476-477, *Nov. 1898*

Thirty thousand lives were snuffed out when Mount Pelée erupted in 1902, annihilating Martinique's port of St. Pierre. MORRIS J. ELSING

Origin of the Physical Features of the United States. By G. K. Gilbert. 308-317, *July 1898*
Geographic Development of the District of Columbia. By W J McGee. 317-323, *July 1898*
Geographic Work of the General Government (U. S.). By Henry Gannett. 329-338, *July 1898*
Geographic Work by the Bureau of American Ethnology. By W J McGee. 98-100, *Mar. 1898*
Geographical Research in the United States. By Gardiner G. Hubbard and Marcus Baker. 285-293, *Oct. 1897*
The Effects of Geographic Environment in the Development of Civilization in Primitive Man. By Gardiner G. Hubbard. 161-176, *June 1897*
The National Geographic Society: Synopsis of a Course of Lectures on the Effects of Geographic Environment in Developing the Civilization of the World. By Gardiner G. Hubbard. 29-32, *Jan. 1897*
The Geography of the Southern Peninsula of the United States. By John N. MacGonigle. 381-394, *Dec. 1896*
Geographic Work in Peru. 407, *Dec. 1896*
The Work of the National Geographic Society. By W J McGee. 253-259, *Aug. 1896*
Geographic History of the Piedmont Plateau. By W J McGee. 261-265, *Aug. 1896*
A Geographical Description of the British Islands. By W. M. Davis. 208-211, *June 1896*
Geography of the Air. By Adolphus W. Greely. 200-207, *Dec. 29, 1894*
Geographic Notes. By Cyrus C. Babb. Included: The Antarctic Continent; Magnetic Observations in Iceland, Jan Mayen and Spitzbergen in 1892; A New Light on the Discovery of America; Monographs of the National Geographic Society; Important Announcement Concerning Essays. 217-228, *Dec. 29, 1894*
Laws of Temperature Control of the Geographic Distribution of Terrestrial Animals and Plants. Annual Address by C. Hart Merriam. 229-238, *Dec. 29, 1894*
Geographic Progress of Civilization. By Gardiner G. Hubbard. 1-22, *Feb. 14, 1894*
Definitions of Geography. 105, 125, 130, 159, *Jan. 31, 1894*
The Relation of Geography to History. By Francis W. Parker. 125-131, *Jan. 31, 1894*
The Geographical Position and Height of Mount Saint Elias. By T. C. Mendenhall. 63-67, *July 10, 1893*
Geography of the Air. By Adolphus W. Greely. 85-100, *Mar. 18, 1892*
Geography of the Air. By Adolphus W. Greely. 41-52, *May 1, 1891*
Geography of the Land. By Herbert G. Ogden. 31-40, *Apr. 30, 1891*
Geography of the Land. By Herbert G. Ogden. 31-48, *Apr. 1890*
Geography of the Air. By Adolphus W. Greely. 49-63, *Apr. 1890*
Geography of the Land. By Herbert G. Ogden. 125-135, *Apr. 1889*
Geography of the Sea. By George L. Dyer. 136-150, *Apr. 1889*
Geography of the Air. By Adolphus W. Greely. 151-159, *Apr. 1889*
Geography of Life. By C. Hart Merriam. 160-162, *Apr. 1889*
Introductory Address. By the President, Gardiner G. Hubbard. 3-10, *Oct. 1888*
Geographic Methods in Geologic Investigation. By W. M. Davis. 11-26, *Oct. 1888*

The Classification of Geographic Forms by Genesis. By W J McGee. 27-36, *Oct. 1888*
